herikcbrecher@outlook.com

Dynamic Computer Vision Engineer with over 4 years of experience in AI and data science, dedicated to driving innovation through the development of scalable machine learning pipelines. Expertise in Python, TensorFlow, and PyTorch, coupled with a strong foundation in deep learning and traditional computer vision techniques, enables the delivery of impactful solutions. Proven ability to collaborate with cross-functional teams to tackle complex business challenges and enhance operational efficiencies. Committed to leveraging cutting-edge methodologies and cloud architectures to build reliable AI systems that significantly improve productivity.

Experience

Senior - Machine Learning Engineer

Telus Digital, Remote

September 2025 - Current

- Developed scalable machine learning pipelines to optimize AI solutions.
- Collaborated with cross-functional teams to address complex business challenges.
- Implemented advanced computer vision algorithms using TensorFlow and PyTorch.
- Leveraged cloud platforms (AWS and GCP) to enhance system reliability.
- Conducted performance evaluations and iterative improvements on ML models.

Senior - Computer Vision Engineer

Deloitte, Remote

April 2025 - September 2025

In the current role as a Computer Vision Engineer, focus is on developing advanced solutions that leverage deep learning and traditional computer vision techniques. This position involves collaborating with cross-functional teams to understand and address business challenges through innovative technology applications.

- Contributed to the design and development of computer vision systems that enhance operational efficiencies, resulting in measurable improvements in productivity.
- Implemented state-of-the-art algorithms for image classification and object detection, achieving significant accuracy enhancements.

Expert Consultant - Computer Vision Engineer

Recato, Remote

November 2024 - September 2025

- Design and optimize computer vision models for shoplifting detection, including tracking and behavioral analysis.
- Build scalable video-processing pipelines using Python, GPU inference, and modular architecture.
- Develop and maintain production-ready code, with automated testing, CI/CD, and containerization (Docker).

- Manage datasets and annotations, applying clustering, feature extraction, and performance evaluation.
- Translate business needs into technical solutions, guiding stakeholders on AI implementation and deployment.

Mid-Level II RPA Developer

Deloitte, Remote

August 2021 - March 2024

While serving as an RPA Developer, responsibilities included automating business processes using various RPA tools. This role required a thorough understanding of the business processes to identify automation opportunities and deliver effective solutions.

- Successfully automated multiple workflows, leading to a reduction in processing time by over 30%.
- Collaborated with stakeholders to gather requirements and ensure that the automated solutions met business needs and compliance standards.

Entry-Level RPA Developer

BRF, Remote

October 2020 - August 2021

- Created an RPA system that connected to various APIs and web services to capture and process data, resulting in a 99% improvement in data accuracy
- Developed and implemented a robotic process automation (RPA) system that automated more than 50 manual tasks, resulting in a 99% improvement in operational efficiency
- Developed an artificial intelligence-driven RPA system that reduced the need for manual intervention by 95%

Trainee

Unimed Litoral

January 2019 - December 2019

- Delivered critical systems support at a mid-sized IT firm, optimizing infrastructure across networks, printers, and computers. Leveraged Jira, SQL, ETL, and Tasy to streamline operations, assisting over 500 employees daily and enhancing cross-departmental productivity and efficiency.

Education

Postgraduate Degree in MIT in Artificial Intelligence, Machine Learning and Deep Learning
March 2024

Infnet Institute at Rio De Janeiro, Brazil

Bachelor's degree in Computer Science December 2021

University of The Itajaí Valley at Itajaí, Santa Catarina, Brazil
