Education

VELLORE INSTITUTE OF TECHNOLOGY

Computer Science & Engineering, CGPA:9.17

Vellore, India

2020 – 2024

GREENWOOD HIGH INTERNATIONAL SCHOOL

12th ISC – 95.25%, 10th ICSE – 95%

Bangalore, India

2014 – 2020

Experience

WELLS FARGO

Software Engineer

Bangalore, India

Aug 2025 – Present

- Lead the design and development of new Salesforce CRM features for Wealth and Investment Management (WIM), including prospect and household management capabilities, enabling Financial Advisors to manage clients, prospects, households, and related parties seamlessly.
- Part of the WIMT Generative AI team, developing innovative GenAI applications while also governing safe and effective usage of Generative AI across Wealth and Investment Management. Additionally, I hosted a WIMT GenAI Hackathon to encourage innovation and collaboration within the line of business.
- Designed, architected, and delivered multiple Generative AI applications, including:
 - AI Agent platform integrating with Salesforce, Splunk, OracleDB, Confluence, and other systems via Model Context Protocol (MCP), enabling faster triaging and resolution of production issues.
 - AI-driven financial advisory assistant combining client data, real-time market feeds, and internal research to provide personalized investment insights.
- Recipient of Team Spotlight Award for delivering a major Salesforce CRM feature as part of a high-performing team.
- Winner of the WIMT 2025 GenAI Hackathon for building a multi-agent chatbot with micro-frontends for Financial Advisors to interact with all our wealth management systems through one chat interface.

Program Associate

Aug 2024 – Aug 2025

- Led the design and development of Salesforce CRM features for WIM, including new prospect and household management capabilities, driving the decommissioning of legacy CRM by porting critical functionality into Salesforce.
- Delivered multiple Salesforce utilities, including:
 - A highly customizable schedulable batch data purging tool.
 - A custom Activity Timeline component supporting any object type beyond default Salesforce limitations.
 - A high-volume batch migration application migrating thousands of files from legacy servers.
- Designed, architected, and implemented Generative AI solutions, including:
 - GenAI-powered fee remediation system, reducing manual effort by over 60%.
 - Intelligent auto-tagging and task creation on Salesforce advisor notes to drive Next Best Actions.
- Winner of Wells Fargo Technology Hackathon 2025 for a GenAI-powered orchestrator enabling intelligent email and document triage/routing.
- Recognized with the Manager Spotlight Award for hard work, dedication, and commitment to leveraging cutting-edge technologies, particularly Generative AI, to deliver impactful solutions.

WELLS FARGO

Technology Intern Analyst

Hyderabad, India

Feb 2024 – Jul 2024

- Contributed to the modernization of Wealth and Investment Management by designing and developing an application using Spring Boot, MongoDB and Kafka, facilitating the migration of legacy applications to cloud-based solutions.
- Finalist in the Wells Fargo Global Technology Hackathon 2024, competing among 20,000+ participants. Developed a Retrieval-Augmented Generation application using Azure AI Studio, LangChain, and Python to enhance the resume matching process.
- Designed and developed Salesforce components, enhancing system capabilities and improving operational efficiency.

FACCTUM

Machine Learning Intern

Bangalore, India

Jan 2024 – Feb 2024

- Developed an advanced merchant monitoring solution, tracking websites, domain information, social media, and news articles for comprehensive insights.
- Designed and implemented an efficient multi-class MCC classification system, integrating Retrieval-Augmented

Generation (RAG) and Large Language Models (LLMs) to enhance accuracy.

- Built a robust web crawling system using Apache Nutch and Solr, extracting actionable insights from merchant websites for data-driven decision-making. Created a visually informative merchant webpage visualizations using UMAP, enabling better data interpretation and analysis of merchants.

CITI BANK

Pune, India

Technology Summer Analyst Intern

May 2023 – July 2023

- Implemented Playwright for UI testing integrated with Jenkins on Lightspeed Enterprise, automated API testing with Cucumber and Gherkins, and developed a comprehensive Tableau dashboard during the internship.

SAMSUNG R&D INSTITUTE INDIA

Bangalore, India

Machine Learning Research Intern

Nov 2022 – May 2023

- Conducted research in Explainable AI in text, and developing innovative solutions with a team of researchers and engineers.
- Created a Deep Learning pipeline to automatically generate text concepts and acquire Concept Activation Vectors, resulting in an improved understanding of how NLP models make decisions and their performance.

WIPRO

Bangalore, India

Data Analytics Intern

May 2022 – July 2022

- Developed an event log correlation engine using Apache Flink to proactively identify and solve customer issues while using Wipro VirtuaDesk, which helped the company to effectively address customer issues and improve user experience.

BYTE AVENUE

Bangalore, India

Machine Learning Engineer

Sept 2021 – May 2022

- Built a robust Deep Learning pipeline using Graph Neural Networks to perform Code Similarity Task using Pytorch.

Projects

PADHAI: *Langchain, GPT-4, Python, NextJS, Node.js, MongoDB, Docker, NGINX, Android, Jetpack Compose, Azure*

- Developed an agentic course generation app that provides curated roadmaps, recommended videos, and resources.
- Architected the app using a resilient microservices framework, seamlessly orchestrated by NGINX for optimal scalability and adherence to industry standards.

OURCHATSTORY.CO - #WHATSAPPWRAPPED: *Python, FastAPI, NextJS, NGINX, Azure*

- Developed an application to get beautiful insights about user's WhatsApp chats that they can share with their friends.
- Used by people all over the world at the end of the year with more than 2k users using the website concurrently.

MOM BOT: *PyTorch, Python, FastAPI, Transformer*

- Developed an NLP model using T5 transformer to generate meeting minutes (MOM) from the transcript of a meeting, contributing to a practical solution that streamlines the MOM creation process.

VITTY: A VIT TIMETABLE APP: *Kotlin, Android, Firebase, JavaScript*

- An Android App with over 30k users that lets students view their timetable, has widgets to tell them their classes, sends notifications for their upcoming classes and more.

GANDALF - PRECISE WEBSITE CONTENT CLASSIFIER AND BLOCKER: *NLP, Transformer, Python, Tensorflow*

- Engineered the Gandalf Model for precise website content classification, employing DistilBERT Transformer and BiLSTM.
- Submitted to a reputable publication, highlighting its contribution to advancing content filtering and blocking systems.

Technical Skills

Languages: Java, Python, Kotlin, C/C++, SQL, Powershell, JavaScript, TypeScript, HTML/CSS, PHP, R

Frameworks and Tools: Tensorflow, PyTorch, Langchain, Apache Flink, React, Next.js, Cypress, Playwright, Git, Docker, Azure, Firebase, AWS, Salesforce, MongoDB, PostgreSQL, OCP

Certifications: Deep Learning Specialization, Azure Fundamentals, MongoDB Instructor-Led Trainings

Achievements

- Winner of Wells Fargo Technology Hackathon 2025
- Finalist of Wells Fargo Global Technology Hackathon 2024
- Technical Lead of Google Developers Students Clubs VIT
- Runner up at Code for Good'23 hosted by JPMC
- Selected to be a part of Adobe Career Academy'22
- Notebooks Expert on Kaggle
- Winner of VinHack'23 and more hackathons
