

Hinrik Gudmundsson

U.S. Work Authorization | Durham, NC 27701 | +1 (919) 201-8702 | hinriksnaer@gmail.com | HinrikGudmundsson.com

Machine Learning Engineer with 5 years of software development experience, specializing in AI consulting and delivering advanced machine learning solutions across various industries. Expert in cloud infrastructure, deep learning, large language models, and generative models. Currently contributing to open source deep learning frameworks and large language models.

PROFESSIONAL EXPERIENCE

Machine Learning Engineer

Remote, Durham NC

Maven

February 2022–February 2024

- Led the design, development, and integration of scalable machine learning solutions within client's existing cloud infrastructure
- Communicated with clients to set and manage project milestones/deliverables for advanced data driven solutions
- Delivered advanced revenue forecasting models with average accuracy of 98.6%

Machine Learning Engineer

Reykjavik, Iceland

Contract work

August 2021–February 2022

- Collaborated closely with clients from various technical backgrounds to establish clear project objectives and timelines, ensuring seamless integration of custom deep neural networks and sophisticated machine learning solutions
- Exceeded client expectations by delivering tailored deep neural network solutions for precise detection of fillable fields on scanned forms
- Enhanced visitor experiences for a museum by integrating cutting-edge augmented reality features, powered by advanced computer vision technologies

A.I. Researcher

Reykjavik, Iceland

Maven

October 2020–August 2021

- Conducted research on alternative methodologies for convolutional neural networks to address real-time quality assurance on embedded devices with limited computational power
- Proposed a new deep learning architecture along with novel optimization approaches, enhancing system efficiency
- Delivered a solution that outperformed previous methods in terms of speed, accuracy, and memory optimization, significantly improving real-time quality assurance capabilities for the company product

Natural Language Processing Engineer

Reykjavik, Iceland

Mideind

Summer 2020

- Tasked with the design and implementation of state-of-the-art voice recognition functionality to accurately interpret and process user commands
- Successfully utilized advanced NLP techniques and machine learning algorithms to deliver enhanced smart assistant understanding of natural language, resulting in new features for controlling IoT devices

Research Engineer

Reykjavik, Iceland

iStopMM

October 2018–September 2019

- Successfully managed sensitive data for the world's largest myeloma study, involving over 80,000 participants
- Collaborated effectively with experts across various disciplines to guarantee project success and maintain integrity, focusing on the establishment of reliable automated ETL (Extract, Transform, Load) pipelines, secure and reliable system design, and versatile data infrastructure for analytical accessibility

EDUCATION

University of Amsterdam

Amsterdam, Netherlands

Master of Science in Artificial Intelligence

August 2021

University of Iceland

Reykjavik, Iceland

Bachelor of Science in Computer Science

February 2019

SKILLS

Python, Chat Bots, Computer Vision, Natural Language Processing, Project Leadership, Collaboration, SQL, Large Language Models, Databricks, Machine Learning, Communication, Cloud Services, llama, HuggingFace, PyTorch, CUDA, Bayesian Statistics
