

AYUSHMAN PRANAV

MLOps Lead at Stuvally Technology • <https://theayushmanpranav.com> • theayushmanpranav@gmail.com • [GitHub](#) • [LinkedIn](#)

Professional Summary

AI researcher and machine learning specialist with expertise in MLOps, deep learning, and natural language processing. Passionate about building innovative AI solutions and advancing technology through research.

Experience

MLOps Lead, Stuvally Technology (Current)

Leading MLOps initiatives, designing and implementing data processing pipelines, and deploying AI solutions.

AI Researcher & Writer, Superteams.ai (Freelance)

Conducted research and wrote articles on artificial intelligence, focusing on natural language processing and machine learning applications.

Machine Learning Intern, Asian Dynasties Grace Industries Limited (Internship)

Developed machine learning models and algorithms for data analysis and prediction in industrial applications using computer vision.

Machine Learning Intern, AdvisoryAI (Internship)

Implemented and optimized machine learning models, focusing on natural language processing.

Education

Bachelor of Technology in Artificial Intelligence, Bennett University (Sept 2025)

Grade: 9.1 CGPA

12th High School Diploma, Delhi Public School, Sushant Lok (2021)

Grade: 91 %

Achievements

- Best AI Research Paper Award (ICCRDA-2025, DuyTun University)
- Best AI Research Paper Award (ICDAM-2024, London University)
- 6th Place in Smart India Government Hackathon
- 1st Place in University-Level Kavach Hackathon
- 1st Place in HUNT_AI Hackathon

Skills

- Machine Learning:** Experience with supervised and unsupervised learning algorithms, regression, classification, and clustering techniques.
- Deep Learning:** Proficient in neural networks, CNNs, RNNs, and transformers for complex pattern recognition tasks.
- Natural Language Processing:** Expertise in text analysis, sentiment analysis, language models, and information extraction.
- MLOps:** Experience with deployment, automation, monitoring, and management of machine learning models in production.
- Cloud Services:** Proficient with AWS for deploying and scaling AI applications and data pipelines.
- Research & Development:** Capable of conducting thorough research, implementing new techniques, and developing innovative AI solutions.

Certifications

- AWS Academy Machine Learning Foundations
- AWS Academy Cloud Foundations
- CCNA: Introduction to Networks
- AWS Cloud Quest: Cloud Practitioner
- IBM Certified Artificial Intelligence Engineer

Projects

- Mimicking the Mind's Eye: AI-Driven Methodologies for Rorschach-Inspired Image Interpretation (2024) [Gen AI, Psychology] (ICICC 2024)**

This conference paper explores the integration of image captioning models with visual question answering systems for analyzing Rorschach test images, uncovering hidden personality traits
- Predicting Cloud System Performance and Resource Exhaustion with Machine Learning: Tackling Class Imbalance (2025) (Cloud) (CE2CT 2025)**

The study introduces a novel cloud computing event classification pipeline by integrating enhanced Google Borg clusters telemetry with PCA-driven dimensionality reduction and Synthetic Minority Oversampling Technique (SMOTE) to achieve high-accuracy results across multiple machine learning models.
- Explainable AI for Chest Diagnosis Prediction (2024) (HealthCare) (Explainable AI) (ICETITE 2024)**

This conference paper enhances AI-driven COVID-19 diagnosis by integrating Explainable AI (XAI) techniques, using LIME and VGG16 with transfer learning to improve interpretability, accuracy, and confidence in medical diagnostics
- A Comparative Analysis of Optimized Routing Protocols for High-Performance Mobile Ad Hoc Networks (2023) (Networks) (ICCCN 2023)**

This paper evaluates routing algorithms like Bellman-Ford, Dijkstra, and Genetic algorithms in MANETs. The study focuses on performance metrics like bandwidth, mobility, transmission power, and battery capacity.
- An Efficient Approach for Detecting Neurological Tumors Using Deep Learning (2023) (HealthCare) (ICERCS 2023)**

, this paper introduces a deep learning-based method for detecting neurological tumours, aiming to improve diagnostic accuracy and efficiency.
