Objective: Tech leadership by *empowering teams to overcome challenges, motivate, be impactful, and practice embracing the human side of creativity as we collaborate to achieve amazing things.*

Experience

DeepWork.studio - Q1/2020

Blockchain Studio - Leadership, Architecture, Engineering & UX/UI

Upskill UX/UI design for the blockchain space. The future of adoption depends on it!

Role: Transitioned from co-founder to a part-time advisor

Udacity - Mountain View, CA / Sep 2015 to Jan 2019

E-learning -Leadership, Architecture, engineering & product

The initial role, Android Engineer. I was on a mission to build applications for students. My talent was noticed, promoted to Technical Project Manager (TPM). Due to the success of my TPM role, I was promoted to Senior TPM. I noticed a gap; Udacity lacked Blockchain depth. I prepared material, crafted a plan, and pitched the idea to create Blockchain ND. Fast forward today, the program is live accepting students with an average 4.5-star rating out of 5.

Blockchain Developer Nanodegree

Developed software projects using Bitcoin, Ethereum, Node.js, JavaScript, and Solidity.

Translated expertise into digestible content for engineers/developers.

Established industry partners (Factom, Mad networks, Consensys, and Berkeley).

Role: Program founder/curriculum lead/product manager/lead architect for course projects.

Senior Lead Technical Project Manager & Engineer, Software Engineering

Architected & led teams to deliver \$2+ Million in software projects.

Role: Managed teams, roadmap, goals, sourcing talent, and agile coaching to deliver software solutions.

Android Develop

Architected & engineered mobile applications to manage student career needs

Role: Android mobile engineer

Redding Google Developer Group (ReddingGDG) / May 2011 to Nov 2015

Developer community - Google Ecosystem - Android & Cloud services

Google I/O ambassador. Assisted development with women's in-tech movement.

Role: Google software development education and awareness focused on local and global communities.

Network Designs - Founder / Software Engineer / Jan 2003 to Mar 2015

Managed IT/Software Services - Solutions Architect - Android / Web2 /RESTful APIs

Enterprise, health, and B2B services. The initial focus was to create secure backend web services that were audited for various security compliances. These services grew to become a leading offer for the business. In 2007, I converted the business from managed services to mobile software solutions with the Android mobile platform.

Long term clients: Mercy Medical Centers, PG&E, McKesson Health, Perot Systems, and more.

Role: Founder, solutions architect, and software engineer. Architected & engineered a geofencing mobile app for an inventory of utility lines for PG&E. Backend services for health included DICOM transmission with RESTful best practices for HIPPA compliance.

Spotlight

Blockchain developer Nanodegree

Learn more: <http://meetbrandy.com/?project=udacity-blockchain-nd>

Impact: Creator of the program with one hundred fifty reviews and an average 4.5-star review out of 5

Role: Lead architect, founder, and creator. Responsible for the building content team, management of the program, and the architecture of projects/content for the global audience. Developed advanced full-stack course projects with Ethereum Blockchain, Node.js, Javascript, and Solidity smart contracts.

Thrive Away (Project Silo: Android)

Learn more: <http://meetbrandy.com/?project=silo>

Impact: Worked with Ariana Huffington to change history with screen readers to modify user habits for Android & iOS.

Role: Lead architect, technical project manager, and backup engineer.

ALSO (Project VR: Android & iOS)

Learn more: <http://meetbrandy.com/?project=project-conference-vr>

Impact: Innovating entertainment utilizing AR/VR with data for attendees to visualize important key metrics.

Role: Lead architect, technical project manager, and backup engineer.

Google Labs - (Project Urban Metrics: Android)

Learn more: <http://meetbrandy.com/?project=urban-metrics>

Impact: The codebase was sold to Google Labs.

Role: Lead architect, technical project manager, and backup engineer.

Astra Finance - (Project Astra: Machine Learning / iOS / Android / Backend services)

Learn more: <http://meetbrandy.com/?project=project-astra>

Impact: A recovered project, inspired new team. We solved the machine learning bottlenecks that impacted performance and led it to market release. Ultimately, developed a machine learning routine as a cloud service to manage user data and integrate with PLAID banking services accepting users to this day.

Role: Lead architect, technical project manager, and backup engineer.

Technical Skills: Software architecture, Blockchain (Bitcoin and Ethereum), Distributed File System (DFS), mobile development with Android, Java, full-stack web services utilizing javascript with node.js, and enterprise software solutions.

Leadership Skills: Team collaboration, Agile methodologies, software development life cycle (SDLC), and requirements analysis.

Hobbies: Piano, photography, and digital art.
