  public init() {
  """
  SUMMARY:
  Senior iOS Engineer with 6+ years shipping production apps at scale,
  from a 10M-user consumer platform at Ibotta to independently architecting
  an AI-powered real-time system at Noema. Deep expertise in Swift, SwiftUI,
  clean architecture, and end-to-end product ownership.
  """
 }
}

// MARK:- WorkHistory
extension Profile: WorkHistory {
func noema_experience_2025_to_current() {}
/*
• Architected a fault-tolerant AI inference pipeline using SSE + polling fallback,
  achieving near-zero task loss across app restarts and unreliable network conditions.
• Designed an end-to-end generation lifecycle spanning client and backend, including
  queueing, task orchestration, install-level quotas, and entitlement enforcement.
• Implemented a resilient real-time delivery system (Live Activities + APNs + webhook
  reconciliation) ensuring state consistency across foreground, background, and Siri-
  triggered sessions.
• Built a two-tier service architecture (Public vs Authed) enabling instant guest
  playback with zero-auth boot and atomic service reconstruction on identity changes.
• Developed a secure access and monetization layer with token rotation, replay attack
  detection, and real-time subscription enforcement via RevenueCat.
• Improved perceived performance through latency-aware UX design, introducing a
  simulated progress model that increased generation completion rates and reduced user
  drop-off.
*/

func ibotta_experience_2020_to_2024() {} // Link -> 🔗
/*
• Dynamic Island: Co-led feature shipped ahead of schedule; boosted task engagement by
  15% across iPhone 14 Pro users.
• Performance & Stability: Reduced memory leaks by 25% through background queue
  optimization and concurrency fixes; crash-free sessions increased measurably.
• Data Accuracy Migration: Owned real-time event tracking migration (AWS + Looker +
  Charles Proxy), improving impression accuracy by ~20% for millions of users.
• Testing: Increased automated test coverage by 40%, reducing critical bugs in
  production by 30%.
• Revenue Integrations: Co-led retailers' direct account linking projects (SDK +
  feature flags), resulting in faster user onboarding and a 7-figure revenue impact.
• Leadership & Collaboration: Mentored associates/interns and partnered with staff
  engineers, improving onboarding docs (cutting ramp-up by 25%) and driving cross-team
  architectural decisions.
• Deployment: Shipped 1,200+ code contributions to an app used weekly by 10M+ active
  users.
*/

func sulzer_experience_2020() {} // Link -> 🔗
/*
• Built reusable SwiftUI components and CoreData persistence utilities, improving
  developer velocity by ~20%.
• Delivered a complete iOS EV-charging app from Zeplin designs to production,
  integrating with backend APIs for seamless Android/iOS parity.
• Advocated and practiced TDD, introducing new unit tests that improved reliability and
  cut regression bugs in QA by 30%.
*/

func self_employed_experience_2019() {}
/*
• Migrated legacy Objective-C iPad app to Swift, improving responsiveness by ~40%.
• Integrated Google and Twitter sign-in, reducing onboarding time by ~50%.
• Added Apple Pay, increasing transaction completion rates by ~25%.
*/
```
