RELATED PROJECTS/ EXPERIENCES

Server Room Monitoring System (01/2018 - 05/2018)

Worked on independent project to Develop and design web application for monitoring the server room for CSIT Department. This platform uses sensors with integrated Raspberry Pi (in Python) to monitor humidity, temperature, network speed, and stream live video of the server room.

FAM Inc. (08/2017 - 12/2017)

Led the project team; inspired and motivated team toward meeting the organization and project objectives and goals. Developed a Windows platform/web-based application (in VB.Net and Asp.Net) to visualize the perspectives on different theories for the sociology department. This platform allowed users to compare and contrast their views among their sociological ideologies through graphical representations.

Lead Student Technical Assistant (06/2016 - 05/2018)

Managed the Student Technician Team; managed work progress/schedules; assigned help tickets; monitored progress; worked with clients to understand problems and resolve them. Developed web-based kiosk system to display the names of student workers who are on the clock, using JavaScript and HTML5. This application aids the IT Helpdesk to track the schedules of the student workers.
