Addis Ababa , Ethiopia

SUMMARY

A Data Engineer who is proficient in Python and SQL. Additionally adept at building end-to-end Scalable data pipelines, applying ETL and ELT procedures, constructing scalable machine learning models that address real-world issues, and working with Natural Language Processing, computer vision, and recommendation systems. Proven proficiency in data engineering practices to ensure robust and efficient data processing for impactful project outcomes.

EDUCATION

Bahir Dar University

Bachelor's Degree in Computer Engineering | 2016 – 2021

- Object Oriented Programming
- Algorithms and Data structure

10 Academy

Data | ML Engineer | May 2021 – Jul 2021

- Designing and building end to end data pipelines
- ML Model, Evaluation, and Deployment.

PERSONAL PROJECT

Data fetching and preprocessing lidar point cloud dataset

- Built a python module for data fetching and preprocessing from a lidar point cloud in a public dataset on Amazon. Built a data pipeline to extract point cloud data using PDAL. Added a visualization module to graphically display the returned elevation files. Packaged and deployed modules on PyPI.

Speech to text for African languages

- Built a model that can translate a recording for the Amharic language. the dataset was 20 hours of audio

SKILLS

- Python
- SQL and NOSQL
- API Development (Flask, Fastapi)
- AWS Cloud
- Computer Vision
- NLP
- LLMs, Agentic Workflows, RAG
- BI Dashboards (Redash, Superset)
- React
- Docker, Kubernetes, Terraform
- Data Modeling
- Spark
- Airflow
- CI/CD, Pytest

PROFESSIONAL EXPERIENCE

Data Engineer

Kifiya Financial Technology PLC | Aug 2022 – Present

- Worked in a team in building a robust credit scoring model for MSME businesses, enabling banks to identify and lend to trustworthy customers without requiring collateral. Successfully deployed the model, resulting in reaching 50,000 businesses within a span of 6 months and disbursing over 500 million birr
- Designed and implemented comprehensive data pipelines for complex and unclear datasets, leveraging tools such as dbt, Feast, Athena, lambda, Great Expectations, Airflow, Spark and others.
- Proficient in containerization and orchestration technologies such as Docker and Kubernetes for efficient deployment and scaling of data projects.
- Utilized geospatial data to evaluate regional engagement and optimize the bus ticketing system, resulting in improved operational efficiency and customer satisfaction.
- Developed a React application tailored for banks to facilitate the testing of new models, complemented by the integration of FastAPI for efficient and responsive backend services.

ML Engineer Intern

TechCamp Ethiopia | Feb 2022 – Mar 2022

- Selected to participate in a prestigious two-month internship program organized by the US Embassy and Nvidia, focusing on cutting-edge technologies in computer vision and NLP.
- Led the development of a web application designed for physicians, enabling them to accurately diagnose patients with COVID-19, tuberculosis, or determine overall lung health by analyzing x-ray images

Software Developer Intern,

University of Gonder | Sep 2019 – Jan 2021

- Designed and developed a comprehensive software system for managing student registrations for summer internships at the university.
