

Daniel Tan

Selangor, Malaysia | +6014-629 7280 | danieltan218@gmail.com | danieltan.dev | [LinkedIn](#) | [GitHub](#)

EDUCATION

Universiti Tunku Abdul Rahman

Bachelor of Computer Science

Cumulative GPA: 3.83/4.0; First Class Honours Graduate and 9-time Academic Honours Recipient.

Perak, Malaysia

Jan 2019 - Jan 2022

WORK EXPERIENCE

AEON DIGITAL BANK (Malaysia's First Islamic Digital Bank)

Kuala Lumpur

Data Engineer II (formerly Data Analyst → Data Engineer I)

Jan 2023 – Present

Airflow, k8s, dbt, AWS (Redshift, S3), Docker, Python, Pydantic, Kafka, Github Actions, Terragrunt (Terraform), DataHub

- Owned and scaled end-to-end ELT pipelines powering Regulatory Reporting (BNM), ERP, Treasury, and E-Invoicing systems; designed modular Airflow (k8s) + dbt (medallion) architecture ingesting from S3/Postgres into Redshift and downstream systems (Kafka, SFTP, APIs) with data contracts and validation to support Finance-critical workflows.
- Led E-Invoice (LHDN) integration as main contributor, delivering end-to-end submission and response pipelines (SFTP, S3, Kafka) through UAT and Production readiness; eliminated vendor dependency (~RM100K) via in-house encryption pipeline.
- Owned Regulatory Reporting pipelines (NSRS, CCRIS, PIDM), delivering enhancements across 30+ data models/reports while working closely with Finance/Ops on data quality, mapping, and timely submissions for compliance.
- Owned ERP integration pipelines, collaborating with Finance and Treasury to automate daily trial balance reconciliation and improve data accuracy, reducing validation failures by ~39%.
- Improved DAG runtimes by ~40% through dbt optimizations; implemented SQL linting and CI checks (sqlfluff, mypy, ruff).
- Co-designed and implemented monolithic ELT and integration pipeline architecture, powered by a reusable in-house package enabling highly modular pipelines and reducing new-pipeline development time by 50%+.
- Built a Streamlit self-service tool that democratized data refresh and report generation to non-technical Finance users, reducing manual effort by 40+ hours/month and removing dependency on the data team.
- Contributed to the data warehouse core layer redesign - encompassing standardized schema conventions, metadata fields, validation guidelines, and dbt best practices - ensuring traceability, consistency, and maintainability across the data warehouse.

DOCTORONCALL (Malaysia's leading Digital Health platform)

Selangor

Data Analyst

Feb 2022 – Dec 2022

Tech: GCP, BigQuery, Holistics.io, Looker Studio, Pandas, Airflow, Excel, Google Sheets, Google Analytics, Selenium

- Led, managed and upskilled a Data team of 8 analysts in both technical and soft skills while acting as the bridge between business and data, gathering requirements, standardizing processes and improving team efficiency.
- Built automated dashboards and reporting systems (BigQuery, Looker Studio, Holistics) that eliminated 40+ hours/week of manual work, while delivering in-depth campaign and product analyses that informed pricing, growth, and strategic decisions.
- Developed Python-based web scrapers to track 10+ competitors' pricing, increasing SKU coverage by 50% and replacing manual workflows equivalent to 300+ hours/week, directly supporting pricing strategy and negotiations.

SETEL VENTURES SDN. BHD. (Mobile App for seamless refuelling and retail-on-the-go experience)

Selangor

Data Analyst Intern

Oct 2021 – Jan 2022

- Analyzed transactional and campaign data to generate marketing insights, and built a Python/SQL-based analytics tool (Altair, Hex) enabling users to dynamically explore customer segmentation and distributions for faster decision-making.

PROJECTS

Local Data Lakehouse | Trino, Iceberg, MinIO, Airflow, dbt, Docker

Oct 2025

- Developed an end-to-end data lakehouse using Iceberg for table management, MinIO for object storage, Airflow + dbt for orchestration & ETL, and Trino as a query engine.

Real-time Lakehouse | Kafka, Spark, Iceberg, MinIO, Docker

Oct 2025

- Designed and implemented a real-time data lakehouse architecture integrating Kafka for event streaming, Spark for stream processing, Iceberg and MinIO for table management and storage, simulating live transaction data & scalable data processing.

ADDITIONAL

Certifications & Training: AWS Certified Cloud Practitioner | SQL for Data Analysis | Python Data Science & Visualisation
Awards: FWD Insurtech Hackathon 2022 Finalist | MSC Malaysia APICTA Awards Finalist 2021 | The Belt And Road Communication Award - The Tenth China Students Service Outsourcing Innovation and Entrepreneurship Competition 2020 ([Link](#)) | ASEAN Data Science Explorers 2020 Participant.
