WORK EXPERIENCE

Data Engineer (Snowflake)

Dell Technologies

📅 May 2025 - current

📍 Round Rock, TX

- Engineered Snowflake Snowpark pipelines, **cutting refresh failures by 29%** for revenue dashboards.
- Orchestrated dependencies in Apache Airflow, reducing data lag to 17 minutes for morning operations reviews.
- Modeled transformation layers in dbt Core, reducing quarterly defects from 6 to 3.1 by implementing rigorous testing protocols and validation checks.
- Instrumented monitoring with Monte Carlo Data Observability, enabling 16 analysts to catch anomalies before business reviews.

ETL Developer

AT&T

📅 March 2023 - April 2025

📍 Dallas, TX

- Developed and implemented automated billing workflows in Informatica PowerCenter, stabilizing 9 inbound source feeds to ensure accurate usage reporting.
- Versioned schema changes with Liquibase, ensuring consistent schema deployment across 7 simultaneous release trains, eliminating discrepancies during updates.
- Created detailed data contracts from product specifications, **reducing signoff time from 9 to 4.2 business days** and streamlining the project approval process.

Junior Data Engineer

Oracle Corporation

📅 June 2022 - February 2023

📍 Austin, TX

- Implemented data validation processes in Oracle SQL Developer, processing 43.7 million rows daily and ensuring accurate internal reporting.
- Streamlined the nightly data ingestion process using Snowflake, maintaining a consistent 2.8-hour batch window for efficient data loading.
- Mapped new dataset structures, **reducing setup effort by 11.4 staff-hours** per intake.

EDUCATION

Bachelor of Science

Computer Science

University of Texas

📅 2017 - 2021

📍 Austin, TX

SKILLS

Tools

- Snowflake Snowpark
- dbt Core
- Apache Airflow
- Informatica PowerCenter
- Oracle SQL Developer
- Liquibase
- Monte Carlo Data Observability

Soft Skills

- Cross-system root cause isolation
- Business-rule translation into data contracts
