

DEVOPS AUTOMATION QUALITY ASSURANCE ENGINEER

Description Overview

We are looking for a DevOps Automation Quality Assurance Engineer to join our growing team, under the direction of the Software Engineering Manager.

The DevOps Automation Quality Assurance Engineer is responsible for developing, evaluating, implementing, and maintaining automated and manual QA, including the further development and maintenance of our existing DevOps pipeline. This individual will advance the automation quality assurance efforts of FarmLink's software development projects, including reviewing technical specifications and user stories.

The DevOps Automation Quality Assurance Engineer works closely with software developers, product owners, scrum masters, and business stakeholders. They will execute and maintain automated test scripts, provide documentation for testing methodologies and tools, report automation results, and ensure a focused, systematic approach to automation testing. Additionally, the Automation Quality Assurance Engineer will monitor the progress of the automation QA efforts of internal and external QA resources.

Summary of Duties and Responsibilities

- Automate, optimize, and drive the efficiency of quality assurance efforts, codes, and processes
- Be able to code in both the front end and back end (Full-stack)
- Monitor the automated build and continuous integration process to ensure an efficient build
- Facilitate and execute the resolution of build/release failures
- Create, maintain, and share technical documentation used by engineers and other team members
- Collaborate with development teams to help engineer, configure, monitor, and support their services. Work with developers to understand implementations, assess related areas of risk, retest following code updates, and perform regression testing as needed
- Provide automation status reports to Agile teams and the SE Manager
- Review the work of other automation testers (including code review) and recommend changes to testers' methodology
- Offer suggestions for the troubleshooting of issues which may arise
- Monitor and strategize platform support
- Perform additional responsibilities as needed

Education & Qualifications

- Diploma, Bachelor's or Master's Degree in Computer Science, Computer Engineering, or related field or equivalent work experience
- Familiarity with the syntax of languages such as JavaScript and Python
- Experience in manual testing using tools such as Postman and Swagger

- The ability to effectively articulate technical challenges and solutions
- Hands-on experience using industry-standard DevOps tools (CI/CD, Git, GitHub Actions)
- Familiarity with Micro-service architectures, including decoupled systems and how to build them
- A strong record of excellence in past projects and an innate inquisitiveness
- The ability to use qualitative data to justify decision-making
- Experience with Django, Vue, FastAPI, Agile, Browser Stack, Kubernetes, and Docker preferred
- Must be legally allowed to visit Canada

****Please note: To be considered, you must also include a strong code sample or GitHub type account for review.**

Competencies

Analytical Thinking

Applying logic to solve problems by taking an abstract or theoretical approach to get things done.

Communication

Effective oral and written use of the English language to convey messages, gather information, and facilitate the exchange of ideas to influence others and yield results.

Flexibility

The ability to adapt to whatever changes happen in a company, without losing focus of goals. This also includes the ability to apply knowledge to new circumstances.

Interpersonal Relations

The demonstrated understanding and respect of others to achieve and maintain a harmonious working relationship with coworkers.

Conflict Resolution

The willingness to resolve differences, especially among employees, to maintain a good working environment.

Working Conditions & Physical Requirements

- Work remotely from home location
- Up to 30+ hours per week of visual effort, including concentrated reading of documentation or close monitoring of computer terminals
