Professional Summary

Enterprise Integration Architect with 15+ years of experience leading digital transformation across cloud, data, and AI domains. Expert in designing scalable microservice and event-driven architectures integrating legacy and modern systems. Proven record of migrating complex platforms from TIBCO to Spring Boot, containerizing workloads on Azure, and deploying solutions across 70+ countries. Adept at turning AI research into production-ready integrations – most recently improving voice-to-text model accuracy from 20% to 80%+ using whisper AI fine-tuning. Strong in stakeholder management, cross-functional leadership, and system modernization.

Core Skills

- Integration & Architecture: Spring boot, TIBCO BW/EMS/MDM, REST, Event Streaming
- Cloud & DevOps: Azure, Docker, Kubernetes, Azure DevOps, Jenkins, CI/CD, Infrastructure as Code
- Data & AI: PostgreSQL, MongoDB, Oracle, Azure Data Services, Whisper AI, Python, Machine Learning Integration
- Design & Modernization: Microservices, API Gateway, Workflow Automation, Security (OAuth2, JWT), Performance Optimization
- Leadership: Agile/Scrum, Global Delivery Management, Mentoring, Stakeholder Communication

Work Experience

Persistent Systems - Principal Architect

Hybrid | Jan 2026 - Present

- Leading enterprise integration architecture initiatives for large-scale healthcare platforms across cloud, AI, and data ecosystems.
- Defining enterprise-wide integration strategies using microservices, event-driven architecture, REST APIs, and cloud-native design patterns.
- Architecting scalable and secure solutions integrating legacy healthcare systems with modern Azure-based platforms and distributed services.
- Driving modernization programs involving migration from legacy middleware platforms to Spring Boot microservices, containerized workloads, and event-streaming architectures.
- Designing reusable enterprise integration frameworks for API governance, logging, security, observability, workflow orchestration, and message processing.
- Leading AI-enabled integration initiatives including intelligent voice-to-text processing and automated data ingestion pipelines for operational efficiency.
- Establishing architecture governance, CI/CD standards, and integration best practices across distributed global teams.
- Collaborating with business stakeholders, engineering teams, DevOps, and product leadership to deliver scalable and resilient enterprise solutions in the healthcare domain.

NIQ – Integration Lead | Technology Lead

Tampa, FL | Mar 2022 - Dec 2026

- AI-Driven Voice Integration: Transitioned the Voice-to-Text(V2T) proof-of-concept into a production-grade AI Model pipeline by training Whisper AI with domain-specific datasets, improving transcription accuracy from ~20% to over 85% enabling scalable offline data collection across low-connectivity regions.
- System Modernization: Decommissioned legacy NPP and architected NIQPics – a microservice-based image and products classification platform – deployed in 70+ countries and integrated with Azure Event hubs and containerized services for near-real-time ingestion.
- TIBCO → Spring Boot Migration: Migration 10+ enterprise modules, shifting from Oracle to PostgreSQL and achieving 30% lower infrastructure costs and 40% performance improvement.
- Integration Frameworks: Developed reusable libraries for logging, Azure Key Vault, MongoDB, and message queueing – standardized integration practices across 10+ global teams.
- Automation & DevOps: Implemented CI/CD with Azure DevOps and Jenkins pipelines – cut deployment time by 30% and introduced zero-downtime blue-green deployments.

- Cross-Functional Leadership: Managed distributed teams (Backend, Mobile, DevOps) and enforced architecture review boards and Agile governance.

Nielsen – Solution Architect

Tampa, FL | Apr 2017 - Mar 2022

- Designed and deployed microservices on Docker and Kubernetes, enabling automated scaling and 99.9% uptime for production workloads.
- Receipt Rocket: Architected full-stack integration between mobile receipt capture app and backend microservices using Sprint Boot, MongoDB, and Azure storage. Improved data ingestion throughput by 45% and automated metadata classification pipelines.
- Migrated Oracle database to PostgreSQL, cutting annual license costs by ~250k and improving query efficiency by 40%.
- Developed reusable integration components (MongoDB + Azure SDK) accelerating new service rollout by 25%.
- Automated regression and smoke testing pipelines (JUnit + Selenium), doubling release frequency and improving defect resolution SLA by 35%.
- Integrated observability with Datadog, improving platform stability and customer NPS (Net Promoter Score) by +15

TIBCO Software Inc. – Senior Consultant | Principal Consultant

Tampa, FL | Apr 2014 - Mar 2017

- GNIC/New Item Coding: Nielsen's first U.S. based product classification platform, delivering the MVP in under 90 days and establishing the foundation for global expansion.
- Architected eCollection, DCT, and LHHT – multichannel data collection systems integrated via REST APIs and event queues – supporting 10K+ daily field submissions.
- Delivered the first MongoDB-based Digital Collection Tool (DCT) with offline synchronization logic, improving mobile survey performance by 60%.
- Re-engineered the Lite Handheld Terminal (LHHT) solution from legacy Windows devices to BYOD-ready Xamarin apps, reducing hardware dependency by 80%.
- Created route optimization logic using TIBCO TERR, cutting audit route time by 30% and increasing field agent productivity.
- Managed the mobile engineering team and oversaw end-to-end delivery for all three platforms.
- Engineering admin tools and backend integrations for LHHT, modernizing legacy workflows and cutting data processing by 40%, while boosting overall system stability.
- Designed and implemented PSRO (Planning, Scheduling, and Route Optimization) algorithm, improving field audit efficiency by 30%.

TIBCO Software Inc. – Programmer | Consultant | Senior Consultant

Pune, India | Jul 2007 - Apr 2014

- Delivered enterprise integrations for Vodafone UK and Swisscom using TIBCO MDM, BW, GI, and EMS, streamlining multi-service order workflows and improving provisioning speed by 35%.
- Implemented Vodafone One's Active Fulfillment Framework (AFF) via TIBCO iProcess, orchestrating Internet, Mobile and TV services and boosting service delivery efficiency by 30%.
- Engineered audit optimization and Data collection process for Nielsen Store Observation (NSO), reducing redundant field visits and increasing audit coverage efficiency by 25%.
- Developed Cross-sell Solution for Mahindra & Mahindra with TIBCO BW and MDM, enabling real-time customer-product matching and increasing conversion opportunities by 20%.
- Extended enterprise data management capabilities by building custom TIBCO MDM workflows, enhancing data integrity and reducing manual reconciliation by 40%.
- Built Fraud detection systems for Neteller, integrating IP geofencing, country restrictions, and compliance workflows – cutting fraud incidents by 40%.
- Centralized Alstom's master data repository and integrated Trillium cleansing workflows, improving data accuracy and reporting reliability by 30%.

TIBCO Software - Intern

Pune, India | Oct 2006 - Jun 2007

- Collaborated with the TIBCO engineering team through the IIIT Pune M.S. program, enhancing skills in system design and Agile methodologies
- Developed plug-ins for TIBCO Business Studio to support BPEL and CIM Process Designer (CPD), improving workflow efficiency and tool integration
- Contributed to internal demo automation using TIBCO BW and EMS, enhancing demonstration capabilities and streamlining custom plug-in development

Education

International Institute of Information Technology, Pune

2005 - 2007

M.S., Advanced Software Technology

- **GPA:** 3.3/4

Veer Narmad South Gujarat University, Surat

2002 - 2005

B.Sc., Information Technology

- **Achievements:** First Class with Distinction

Languages

- English, Hindi, Gujarati
