

Jamil Jalal – DevOps Engineer

838.910.1519 • jamiljalal7794@gmail.com

PROFILE

DevOps Engineer with years of experience in deploying software under both **Agile** and **Scrum** methodologies. Strong knowledge of **automation, scripting, security, debugging, source control, and code testing**. Extensive use of various tools and languages including **AWS, Ansible, Docker, Kubernetes, Jenkins, Linux, SonarQube, YAML, GitHub, GitLab, Terraform, Python, and Java** that resulted in an increase in software development and deployment process efficiency.

EDUCATION

Queens College

May 2020

BS in Computer Science

Graduated with Honors

PROFESSIONAL EXPERIENCE

Launch Consulting Group – Bellevue, WA

Oct 2022 - Feb 2023

DevOps Engineer – Full Time

- Implemented and executed **CI/CD** pipeline using **GitLab** for environment deployment of medical website
- Read, modified, and created **Unix** shell scripts for building software on **HP-UX** system
- Improved deployment process by identifying and **debugging** build failures using log files
- Delivered software solutions consistent with product roadmap and release plan milestones.
- Reviewed **JBake** artifacts to add, remove, and modify files to best align with requirements
- Wrote **Python** scripts to gather key files from database for deployment efficiency
- Created **Confluence** documentation to outline DevOps process and FAQs to client
- Consulted with client on delivery requirements and improvement opportunities.
- Collaborated with Developers, SREs, and other DevOps Engineers to manage code and branches
- Worked in a weekly sprint cycle of the Agile methodology

Sirius XM Radio – New York, NY

June 2020 - Jan 2022

DevOps Engineer – Contract

- Created **CI/CD** pipeline using **AWS CodePipeline** for environment deployment of broadcasting website
- Used **YAML** files with **Unix** commands to outline instructions for application build phases
- Reviewed **AWS S3** buckets to add, remove, and modify artifact files to best align with requirements
- Built images and ran containers using **Docker** to make application accessible for various environments
- Monitored server health and logs on **AWS CloudWatch** and created alarms for awareness
- Secured environments by limiting application accessibility using **AWS VPC** network
- Wrote **Terraform** scripts to provision **AWS EC2** instances with Docker and create AWS VPC network
- Orchestrated pods with containers using **Kubernetes Cluster** services in **AWS EKS**
- Monitored container health using **Prometheus** and **Grafana**
- Ensured cross-system application abilities using Linux, Ubuntu, CentOS, Mac, and Windows **operating systems**
- Improved infrastructure growth by staying up to date with latest tools and technologies

T-Mobile – Bellevue, WA

June 2018 – Jan 2020

DevOps Engineer – Contract

- Created **CI/CD** pipeline using **Jenkins** for environment deployment of communications website
- Configured servers using **Ansible** playbooks and **YAML** files for infrastructure optimization
- Integrated Jenkins jobs with Ansible and **SonarQube** server to allow continuous deployment
- Troubleshoot and **debugged** Java application build failures in Jenkins console
- Managed multiple environment repositories using **Git** source control actions

Simmer TIQC – Flushing, NY

Jan 2017 – Mar 2018

iOS Developer – Full Time

- Brainstormed product requirements and scope with the development team and other stakeholders
- Built out elements using **Swift** programming language for restaurant recommendation applications
- Incorporated several **iOS** development frameworks using Core Data, Core Animation and Core Location.
- Performed **UI/UX** changes and **bug** fixes for optimal software quality
- Analyzed existing iOS applications to improve performance factors such as launch time and resource consumption
- Updated mobile applications with latest features and data in **Google Firebase**
- Reviewed and improved application code for development clarity
