

Ahmet Goksu

ahmet@goksu.in | Geneva, Switzerland | linkedin.com/in/ahmetgoksu | github.com/goeksu

DevOps engineer working on CI/CD infrastructure for ATLAS, a distributed high-performance data acquisition system at CERN. Strong foundation in Python, Docker, AWS, build systems, automation, monitoring and code quality tools.

Experience

CERN

DevOps Engineer

Geneva, Switzerland

Sep 2025 – Present

- Builds and maintains GitLab CI pipelines for ATLAS TDAQ C++ modules: multi-variant builds (AddressSanitizer, UBSan, ThreadSanitizer), static analysis (IWYU, cppcheck, clang-tidy), SAST scanning, and automated coverage reporting per merge request.
- Developed tooling that converts distributed test outputs into structured GitLab artifacts, significantly improving failure triage and developer visibility across CI pipelines.
- Maintains Docker-based build environments for test infrastructure, ensuring reproducible builds across CI runners.
- Investigates failing C++ test cases and CI alerts to rapidly restore pipeline reliability and unblock development workflows.
- Benchmarks module performance across distributed TDAQ node configurations to validate correctness and throughput.

BSH Hausgerate

Solutions Architect

Istanbul, Turkey

Sep 2023 – Sep 2025

- Deployed and maintained AWS data pipelines serving production analytics; implemented Grafana Loki for centralized logging; standardized and documented DevOps practices across teams; worked in Agile/Scrum environment.

NetBSD

Software Developer (Contract)

Remote

Jun 2023 – Sep 2023

- Built payment processing system: Flask REST API, PostgreSQL database, Stripe/PayPal integration, automated workflows. Delivered independently within 3 months.

Skills

Languages: Python, Bash, C/C++
CI/CD & Tooling: GitLab CI, GitHub Actions, Docker, Make, CMake
Infrastructure: Linux, AWS, Kubernetes, Terraform
Backend: Flask, PostgreSQL, SQL
Observability & Security: Grafana Loki, SAST, Burp Suite, Postman

Projects & Open Source

ATLAS TDAQ CI/CD Pipelines

Python, GitLab CI, Docker, CMake, CTest

2025

CI/CD tooling for distributed C++ DAQ modules including multi-variant builds, static analysis, automated testing, and developer-facing reporting.

FreeType Library Performance Benchmarking

C, Python, Make

2023

Developed performance testing modules integrated into the FreeType build system as part of Google Summer of Code.

NetBSD Donation Automation

Python, Flask, PostgreSQL

2023

Payment processing backend with REST API. github.com/goeksu/NetBSD-Donation-Automation

Conserva — Emergency Medical System

Java, Node.js, REST API, Raspberry Pi

2019

End-to-end mobile, web app and IoT API for real-time data collection. *1st Prize, TUBITAK*. github.com/goeksu/Conserva

Publication

A Look at Mobile Applications via Internet Traffic

Arka Kapı Cyber Security Magazine, Issue 9

2019

Published security research on mobile application vulnerabilities including IDOR exploitation, OTP flaws, and push notification abuse using real-world traffic analysis.

Certifications

CCNA: Introduction to Networks — Cisco Networking Academy

2023

Networking fundamentals: TCP/IP, routing, switching, VLANs, packet analysis. Credential

Honors & Recognition

- Ship for World Youth Leaders — Cabinet Office, Government of Japan (2024)
- Hall of Fame, Product Security Advisory — ASUS (2020)
- 1st Prize, Coding Category — The Scientific and Technological Research Council of Türkiye (2019)
