

Engineer passionate about building scalable, high-performance applications that deliver real impact. Led the development of several fullstack apps now serving hundreds of users, and implemented features capable of handling thousands of requests per second. Known for combining analytical problem-solving with adaptability, quickly mastering new technologies, and driving projects from concept to production in collaborative, fast-paced environments.

SOFT SKILLS

- Communication
- Critical thinking
- Continuous learning
- Adaptability
- Teamwork

TECH SKILLS

- Java, Javascript, Python
- REST API development
- Relational databases
- DevOps
- AWS certified

PERSONAL PROJECTS

- Retrieval-Augmented Generation (RAG) AI Chatbot using Spring AI and Llama 3
- Crypto arbitrage trading bot

WORK EXPERIENCE

Freelance Full Stack Developer - JSO.NC (New Caledonia)

march 2023 - present

Consultant until September 2025, Freelance via jso.nc since October 2025.

Full stack developer for a large electricity provider of the Engie group in New Caledonia :

- Full stack developer for a large electricity provider of the ENGIE Group, delivering enterprise applications in a mission-critical environment.
- Built and operated systems supporting electrical grid operations, used by 200+ internal users and handling millions of sensitive records (HR, payroll, customer, financial).
- Led legacy system modernization and replacement, reducing technical debt by ~40% and improving application availability (>99.9%).
- Implemented event-driven and API integrations using Java/Spring and Apache Kafka, processing hundreds of thousands of events per day with strong data consistency guarantees.
- Delivered end-to-end full-stack solutions using Angular, AWS, Kubernetes, PostgreSQL and DB2, deployed in cloud and on-premise environments.

Process Engineer - KNS & PRNC (New Caledonia) & Asco (aerospace) (Belgium)

2012 - 2022

I worked as a process engineer for 3 companies during this period :

- Analyzed and processed large-scale production data using Python across multiple industrial environments.
- Optimized data handling and reporting systems, cutting generation time from 8 hours to 1 hour and significantly improving productivity.
- Led root cause analysis using historical data and implemented corrective actions to prevent recurring failures and improve operational reliability.

EDUCATION

2023 : Web Development bootcamp

Le Wagon Melbourne

(Remote from New Caledonia)

2007 - 2011 : MSc in Electromechanical Engineering

K.U. Leuven (Belgium)
