SUMMARY

High achieving Computer Science BA/MS candidate (3.86 GPA) with hands on internship experience in AI driven solutions, fullstack development, and process automation at IBM. Seeking to apply a strong foundation in software engineering and distributed systems to contribute to meaningful real world applications.

EDUCATION

BOSTON UNIVERSITY

Boston, Massachusetts

BA/MS Candidate in Computer Science Junior (Senior Standing) GPA: 3.86

June 2027

Relevant Coursework: Discrete Math, Linear Algebra, Probability in Computer Science, Computer Systems, Distributed Systems, Software Engineering and Introduction to Analysis of Algorithms, Databases, and Fullstack Software Engineering.

Dean's List: Fall 23', Spring 24', Fall 24', Spring 25'

KEY ACHIEVEMENTS

- Selected as **1 of 20** students for a prestigious full academic scholarship to Boston University, recognizing outstanding academic accomplishments and unwavering commitment to excellence.
- Entered college with **36 credits** from relevant college dual enrollment courses and Advanced Placement classes.
- Graduated **6th** out of **320** students from the John D O'Bryant School of Mathematics and Science with a **4.6 GPA**

EXPERIENCES

IBM

Lowell, Massachusetts

Software Developer Intern

May 2025 – August 2025

- Engineered an AI driven solution for **automated unit test generation** by training a LoRA refined Granite model to enhance testing intelligence and scalability within the Maximo repository.
- Implemented organization wide productivity enhancements by creating and deploying cron jobs to identify stale pull requests across all repositories, delivering weekly reports to streamline code maintenance.
- Developed a **fullstack developer productivity dashboard** to track historical closed pull request data and provide teams with real time performance metrics through a frontend interface.
- Initiated the development of a **repository hotspot tracking tool** to analyze ticket logs, identify high risk files, and proactively reduce recurring support issues.

BOSTON UNIVERSITY

Boston, Massachusetts

Resident Assistant

August 2024 – Present

- Cultivated a vibrant and supportive residential community for **50 students** by serving as a key mentor for academic success, acting as a first responder in crisis situations, and mediating conflicts, while also helping orchestrate a seamless move-in process for a building of **~800 students**.

NORFOLK CAPITAL

Boston, Massachusetts

Software Engineering Intern

May 2024 – August 2024

- Developed a Python script to automate the acquisition data process using Zillow, Redfin APIs, and city property records. This script streamlined the creation of acquisition letters based on property addresses, saving roughly **1 hour per 5 properties** and significantly enhancing efficiency and accuracy in targeting off market properties, thereby increasing acquisition opportunities.

ANALOG DEVICES INC

Wilmington, Massachusetts

Software Engineering Intern

July 2023 – August 2023

- Orchestrated the development and personally implemented a **key synchronization script**, ensuring seamless alignment between external Apollo boards and the GitHub file structure to **enhance overall project development efficiency**.

EXTRACURRICULARS

- National Society of Black Engineers; attended all weekly member meetings and internship events.
- Attended **2wk 8hr/day MIT artificial intelligence bootcamp**. Collaborated on a neural network project. Gained valuable computer science and AI skills while exploring practical AI implementations.
- **Mentor** in the Loop Boston Computer Science program, guiding high school and middle school students in computer science.

SKILLS:

Programming Languages: Java, Python, Go, HTML, CSS, Javascript

Development Tools: Github, Visual Studio Code, IntelliJ IDEA, CI/CD, REST APIs, CI/CD, Agile Methodologies, Kubernetes,

Frameworks & Libraries: LoRA, Pandas, NumPy, Scikit-learn, MERN, Flask
