RESUME

[FULLSTACK DEVELOPER]

[MANUEL AVALOS]

IM A SKILLED WEB DEVELOPER WITH EXTENSIVE EXPERIENCE IN CREATING, MANAGING, AND OPTIMIZING WEB APPLICATIONS. WITH A STRONG BACKGROUND IN PHP, LARAVEL, JAVASCRIPT, AND OTHER WEB TECHNOLOGIES, HE HAS SUCCESSFULLY LED AND COMPLETED NUMEROUS PROJECTS ACROSS VARIOUS INDUSTRIES. HIS EXPERTISE SPANS FROM FULL-STACK DEVELOPMENT TO CLOUD SERVICES AND MACHINE LEARNING, CONSISTENTLY DELIVERING HIGH-QUALITY SOLUTIONS THAT MEET CLIENT NEEDS AND IMPROVE USER EXPERIENCE

TECHNOLOGIES

- Python
- PHP
- Laravel
- MySQL
- Github
- Node.JS
- REST
- HTML
- JavaScript
- CSS
- Go
- Azure
- Azure SQL
- WordPress
- C#
- Entity
- MVC
- Java
- Microservices
- Bootstrap
- Apis

WORK EXPERIENCE

MI CURSOR

APR 2023 - CURRENTLY

Senior PHP Developer

- Led the analysis and fulfillment of user requests and requirements.
- Managed and facilitated meetings, ensuring clear communication of project goals and progress.
- Oversaw delivery timelines and ensured timely completion of tasks.
- Served as Technical Lead for a team member, providing guidance and support.
- Conducted daily stand-ups and utilized tools such as Notion and Excel for task tracking and planning.
- Executed database queries and created APIs to enhance application functionality.
- Prioritized tasks based on project needs and deadlines.
- Held daily meetings with clients to follow up on new modules, address bug fixes, and redesign the platform's user interface.
- Successfully renewed the contract with Anahuac Mexico by effectively managing and addressing client needs, completing a year's worth of delayed work within two months.
- Simultaneously managed and delivered on five different projects
- Tech: PHP, Wordpress, Apis, Excel, Notion, Codeigniter, Github

CAPPA SOFTWARE

JUN 2022 - APR 2023

Fullstack Developer

- Developed and maintained web page structures, ensuring semantic and accessible markup. Utilized HTML5 features to enhance user experience and compatibility across different browsers.
- Styled web applications using CSS and CSS preprocessors like SASS. Implemented responsive design principles to ensure compatibility across various devices and screen sizes. Applied CSS frameworks like Bootstrap to expedite UI development.
- Designed and developed server-side logic using PHP, ensuring secure and efficient processing of user requests and interactions.
- Implemented MVC architecture to separate concerns and enhance code maintainability.
- Utilized Bootstrap to create responsive and mobile-first web designs, ensuring a consistent and visually appealing user experience across different devices.
- Designed and implemented microservices architecture to decompose monolithic applications into smaller, independent services.
- Designed and developed RESTful APIs to enable seamless communication between client and server applications.
- Managed source code versioning and collaboration using Git and GitHub.
- Contributed to the design and development of tailored software solutions, ensuring they meet client-specific needs and industry standards.

MANUEL AVALOS

- Developed a comprehensive system to manage prospects and investors for real estate construction projects. This system facilitates the creation of budgets and quotations, helping users to finalize sales.
- Implemented functionalities to generate accurate and detailed quotations, enabling users to estimate investment amounts and potential returns effectively.
- Designed and developed tools for creating budgets, allowing users to plan and allocate resources efficiently for construction project
- Tech: HTML, CSS, JavaScript, PHP, SQL Server, Bootstrap, Microservices, APIs, Github

FOROBETA

MAR 2019 - DEC 2021

Fullstack Developer

- Provided web development services to help users resolve issues on their websites during the pandemic, ensuring continuous online presence and functionality.
- Managed website projects across various niches, including Movies, Anime, Blogs, and Online Stores, ensuring timely delivery and quality output.
- TGained extensive experience in using Laravel Framework, WordPress, and PHP, enhancing skills in web design and development.
- Supported and updated a system developed under REST architecture and microservices using Java, ensuring its reliability and scalability.
- Created REST APIs using Node.js, Python, JavaScript, and Java, enabling seamless integration and data exchange between systems.
- Contributed to the creation and support of multiple projects, collaborating effectively with team members and stakeholders.
- Developed a payment platform for a client, significantly increasing their revenue through improved electronic payment methods.
- Tech: Laravel, REST, Wordpress, PHP,Java, Microservices,APIs, NodeJS, Python, JavaScript

ITESCO

MAR 2017 - DEC 2020

Fullstack Developer

- Actively participated in over 10 innovation projects during my university period, contributing to various stages of development and implementation.
- Edu2030: Created a fully responsive and service-oriented web application aimed at enhancing teacher activities for inclusive education. This project reduced the time required to fill out teacher reports by 60%, utilizing PHP, MySQL, Bootstrap, and JavaScript to improve user experience and efficiency.
- Developed a software solution for managing teacher activities and student monitoring. Gained experience with C#, Entity Framework, SQL, and MVC development, which contributed to better organization and tracking of educational processes
- Tech: PHP, SQL, MVC, MySQL, Bootstrap, JavaScript,C#, Entity

PROJECTS EXPERIENCE

FREELANCE

JAN 2022

GO Developer

- The goal of the code is to implement an HTTP server in Go that responds with a custom greeting through a specific endpoint. When a GET request is made to the path /employee/hello/{name}, the server responds with a message in JSON format containing a greeting addressed to the name provided. For example, when accessing <http://localhost:3000/empleado/hola/Juan>, the server will send a response with the content {"message": "Hello John"}.

Activities:

- Configure and manage HTTP servers.
- Use the gorilla/mux package for request routing.
- Encode responses in JSON format.
- Manage parameters in API routes.
- This code can be used as a foundation for more complex functionality in a web application, and is useful for testing or demonstrating basic knowledge in creating and managing APIs in Go.

FREELANCE

OCT 2021

Azure

- The goal of this project was to create an ontology to integrate descriptions of disparate NASA datasets and develop an interactive network visualization to represent the relationships between this data. We used HTML, CSS and Bootstrap for the frontend, and PHP for the API. We implemented the project in Azure, raising a service that allowed us to create a temporary subdomain and deploy files from our Git repository. Azure provided a scalable and secure environment to store and manage the JSON data and host the interactive visualization. Specific Azure services included Azure App Service for web application deployment, Azure Storage for file and data management, and Azure CDN to ensure fast and efficient content delivery. This solution enabled seamless integration and interactive exploration of NASA's datasets, making it easier to access and understand the relationships between them.
