Summary

Full Stack Developer with 4+ years of experience, specializing in building scalable, high-performance applications. Skilled in CI/CD, DevOps, and end-to-end ownership across the stack. Proven success in lean startup environments with a strong focus on speed, quality, and impact.

Hands-on experience in the Generative AI domain, including building RAG pipelines, data ingestion workflows, and internal tooling for GenAI products.

Technical Skills

Languages: Ruby, Python, SQL/PostgreSQL, Javascript/Typescript, PHP

Frameworks: React, React-native, Ruby on Rails, Django, Laravel, Flask, Langchain, Next Js

Developer Tools: Docker, Milvus, Amazon Web Services (AWS), Kubernetes, Google Cloud Platform (GCP)

Experience

Enumerate AI - Market Research

July 2022 – July 2025

Software Development Engineer - Gen AI

3 Yrs, Remote

Python, AWS, Postgres, Typescript, React-native, Next Js, LLMs, Langchain, Azure AI

- Built scalable GenAI features like thematic analysis, Q&A playground, and content analysis; integrated LLMs (GPT, Gemini, Claude etc) with RAG workflows, fine-tuning, and custom context representations for LLMs; complemented with classical ML techniques such as clustering for topic and insight extraction.
- Built an internal library to manage multi-provider LLM workflows with integrated guardrails, usage tracking, rate limiting, and fallback strategies.
- Created data processing pipelines for media content, including image upscaling, transcription, and speech diarization, with data sanitation measures like voice and facial activity detection.
- Ported a survey app to React Native with offline support, reducing respondent drop-offs and data loss in low-connectivity regions.
- Migrated monolithic architecture to a scalable serverless setup using AWS ECS Fargate and Lambda, reducing downtime incidents and higher throughput at peak times.

NEETPrep EdTech

April 2021 - July 2022

Software Engineer - Fullstack

1 Yr, Remote

Ruby on Rails, Express, Node Js, Postgres, GraphQL

- Developed an User Streak feature to track user engagement metrics, resulting in a 20% increase in questions solved per month (from 3.5 million to 4.2 million) and a 23% growth in engagement metrics over four months
- Improved user experience by eliminating redundant questions using historical analytics data and statistical tools like Chi-square and K-means clustering.
- Enhanced content delivery by implementing an NLP pipeline for relevant content transcription based on question context, utilizing PostgreSQL full text search capabilities with custom stop words and text search dictionary.
- Maintained and developed core product features, including Dynamic Test Generation, Question Bank, and Live Lectures

Slick Technologies

Jul. 2020 – Dec. 2020

Software Development Engineer Intern

6 Months, Remote

Laravel, React

- As a Fullstack Developer, contributed in building a comprehensive ERP solution from scratch using React & Laravel
- Designed and developed background services to handle Time & CPU intensive tasks

Projects

Relyque - Session Replays for Smarter Product Insight | *Next.js, FastAPI, PostgreSQL, LLMs, GCP*

- A full-stack web analytics platform enabling product teams to understand real user behavior through session tracking, visual replays, and actionable insights—similar in scope to tools like Hotjar or Mixpanel.
- Implemented core features such as session replay, event mapping, error tracking, and network request logging to enable detailed interaction analysis and streamline debugging for engineering teams.
- Used LLMs to summarize user sessions and surface friction points, allowing product teams to quickly extract insights from large volumes of session data.
- Used FastAPI + Next.js with async tasks (transcoding, LLM summaries) offloaded to Google Cloud Run for scalability.

CodeChef Hackathon - Recommendation Engine | *Django, Celery, scikit-learn, Redis*

- Developed a recommendation engine for a web application using the CodeChef REST API, personalizing problem suggestions with a K-means clustering algorithm for tag-based refinement
- Improved performance through an asynchronous task queue, ensuring timely and accurate question recommendations

DGTOOnline - EdTech | *Django, Vue Js, MySQL, Nginx, Redis, Firebase*

- Developed a platform for test conduction and student record management for national competitive exams, collaborating with a local coaching institute.
- Enhanced functionality with custom services like video transcoding and SEO campaigns, serving as the sole developer responsible for development, testing, deployment, and understanding business demands, thereby improving both technical and business acumen.

Education

Gujarat Technological university

Bachelor of Engineering in Computer Engineering - *9.56 CGPA*

Ahmedabad, IN

Aug. 2017 – Jul. 2021

Kendriya Vidyalaya

HSC - *79%*

Gandhinagar, IN

Mar. 2017
