## SKILLS

- Java
- Spring Boot
- REST API
- Git
- Docker
- Redis
- Kafka
- AWS
- Kubernetes
- Terraform
- Linux
- Python
- SQL
- Github Actions
- Javascript/Typescript

## Backend Engineer

### PROFILE

Gustav is passionate about understanding the why behind a product and the problem that it solves. Based on his 5+ years of experience, the solutions which give the best user experiences are found through iterative development with quick validation of ideas. He'd like to further evolve these skills and apply them in a fast-paced environment.

### EXPERIENCE

#### Software Engineer at Sinch, Malmö

JAN 2022 – AUG 2024

Sinch provides a communication platform as a service (CPAAS), its clients can use channels such as SMS, WhatsApp, voice calls or email to reach their customers. Common use cases include marketing, authentication and notifications. Sinch's turnover is 27 722 MSEK (2022) and it has about 4000 employees.

Gustav worked in the public SMS REST API team. The API is used to send billions of text messages per month globally and the volumes are increasing. The clients range from small businesses to some of the largest companies in the world. The main goal was to keep growing the API usage through operational excellence and additional functionality such as upscaling text messages to rich media messages and adding support for MMS in the US, where it's still widely used.

Gustav helped achieving operational excellence by doing re-occurring tasks like responding to alerts, deploying to production, upgrading dependencies, being the last line of support for clients and adding metrics, logs and graphs. It also included one-off tasks like migrating from self-hosted redis instances to AWS managed services and adding tools to handle corrupt state in production.

The project to upscale text messages to contain rich media was one of the largest changes to the SMS API since its inception and Gustav played a large part in designing, implementing and testing the changes. He was responsible for the testing effort across multiple teams. The effort covered both functional and non-functional testing with complex failure scenarios and resulted in a quality feature delivered on time.

Technologies: Java, Spring Boot, Maven, Gradle, REST API, Redis, Kafka, SQL, AWS, Git, Kubernetes, Linux

Methodologies: Kanban, CI/CD, Failure resilience testing, Risk assessments, Test plans, Requirement analysis, Architecture diagrams

#### Consulting Cloud Developer at Fortum, Remote

MAY 2020 – DEC 2021

Fortum is an energy and electricity company with a focus on fossil free energy. Its turnover is 13 600 MSEK (2023) and it has about 5000 employees.

NDA on project details. The assignment was extended multiple times and Gustav was retained despite significant project headcount reduction.

Technologies: Python, Java, .NET, Kubernetes, Docker, AWS, Terraform, Kafka, Linux, Git, Jira

Methodologies: Kanban, CI/CD, GitOps, Architecture diagrams

#### Consulting Fullstack Developer at Accessy, Malmö

SEP 2019 – MAY 2020

Accessy is a proptech company which sells a secure system for unlocking doors with your phone. Its turnover is 15 MSEK (2022) and has 15 employees.

The initial assignment was to integrate the product with an IoT lock from a third party vendor. An integration meant that locks from that vendor could be opened with the app, and configured on the dashboard. After the first integration, the assignment was extended to include locks from multiple vendors. To improve the responsiveness of the mobile app, Gustav developed a new web hook micro service which provided feedback to the user in case the door failed to open.

Technologies: Java, Kafka, Git, React, Kubernetes, IoT

## METHODOLOGIES

---

- Agile
- Kanban
- CI/CD
- DevOps
- GitOps
- Test plans
- Risk assessments
- Failure resilience testing
- Requirement analysis
- Architecture diagrams

## SYSTEMS

---

- Grafana
- Github
- Gitlab
- Jira
- Confluence
- Slack
- Google workspace
- Office suite

## LANGUAGES

---

- Swedish : Native
- English : Fluent
- German : Advanced

## System Development Consultant at Cygni, Malmö

AUG 2019 – JAN 2022

Cygni (now part of Accenture) is a consultant company which has repeatedly won the title "Best workplace in Sweden". They have done so by focusing on retaining senior developers and selectively hiring junior developers.

Gustav is a graduate of the 2-year full stack talent program. In order for the learning curve to be as steep as possible, you are on an assignment from day one with one or more experienced colleagues. You supplement this with a number of shorter, tailor-made training courses. These include lectures and exercises on topics such as architecture and design, version management, project methodologies and the latest frameworks.

## Master's Thesis at TaxiCaller, Linköping

JAN 2019 – JUNE 2019

TaxiCaller Nordic AB is a cloud-based traffic management system. It has a turnover of 26 MSEK and 15 employees (2022).

Gustav developed a deep neural net, WaveNet, for taxi demand prediction. It was based on a previously existing architecture for time-series forecasting. To get results, he had to understand how taxi demand worked and prepare the data set. The neural net better predicted taxi demand than benchmarking models but the maintenance cost would be significantly higher than using a slightly worse, but simpler model. Therefore, the final recommendation was to use a framework instead of WaveNet. Link to thesis.

Technologies: Python, Tensorflow, Pandas, numpy, R

## Summer Engineering Intern at IT-Bolaget Per & Per AB, Linköping

JUN 2018 – AUGUST 2018

IT-Bolaget Per & Per AB is a consultant company which develops apps and tools for the forestry industry. It has a turnover of 20 MSEK and 26 employees (2022). The project was to develop a cloud function that integrated and automatically synchronized the company's software for tracking issues and projects (Jira) with its ERP-system. The time reported on the Jira projects was shown on the invoices sent to the customers. Gustav also made a prototype of a map visualization tool which lead to a contract with a customer.

Technologies: .NET, Angular, Node.js, Azure, Jira

## EDUCATION

---

### MSc Industrial Engineering and Management, International - German

AUGUST 2014 – JUNE 2019

Linköping University, Linköping

- Master and bachelor specialization in computer science.
- Extra courses in machine learning and German.
- International committee, Language and cultural exchange, 2015/2016.
- One-year exchange at the Technical University of Berlin 2016/17, full-time studies in German.
- Webgroup, Developer, <https://i-portalen.se>, 2017/2018.
- Lab Assistant in introductory AI course, Fall 2018.
- Master's thesis at Taxi Caller, developed a deep neural net for taxi demand prediction.

## SIDE PROJECTS

---

### Ordfyran

Multiplayer word game where you pick and place letters to form words. In alpha. Technologies: Java, Spring Boot, Flutter, SQL, Linux

### mynetflixhistory.com

Tool to analyze Netflix viewing history.

Technologies: Java, Spring Boot, Angular, Linux

### open.kattis.com/gustav-svensk

Competitive programming practice in Python and Java. Gustav is ranked top 50 at Linköping University and in Skåne.

Technologies: Python, Java
