Khoa Dinh

Software Developer

+358401997250 khoadinh.work@gmail.com LinkedIn Github Portfolio

Fullstack Developer with 2+ years of experience building scalable web applications using React, Next.js, Node.js, and modern JavaScript/Typescript. Strong in both frontend and backend development, including RESTful API design and CRUD. Experienced in applying MVC architecture, MERN stack, and familiar with modern frontend system design CSR, SSR, and SSG.

Education

University of Oulu Present
Master's Programme in Information Processing Science — GPA: 4.3/5 *Oulu, Finland*

Oulu University of Applied Sciences 2024
Bachelor's Programme in Information Technology — GPA: 4.4/5 *Oulu, Finland*
Thesis: GoViet: Car Sharing Application for Solo Traveler in Vietnam — **Link to report**

Experience

EPIXLIFE Sep 2023 – Present
Software Developer | React, Nextjs, Contentful, Redux, Jest *Valencia, Spain*

- Delivered 20+ UI features and 5+ production-ready pages using React, TypeScript/Javascript, and Next.js
- Managed UI content using CMS Contentful and handled state management with Redux
- Optimized frontend architecture and data fetching, reducing code redundancy by 30% and API calls by 60%, improving performance and scalability by implementing React Query
- Wrote maintainable, testable code and implemented unit tests using Jest to ensure reliability
- Applied AI-assisted development workflows using Claude Code and modern agentic AI tools to accelerate delivery cycles while maintaining high code quality and consistency

OAMK-Darmstadt UAS-Polar Oy December 2022
Internship | Kotlin, MQTT, Sensor, Firebase.

- Designed comprehensive data architecture by Firebase and Use Case Diagrams to define system behavior.
- Conducted user research with 3 students, utilizing qualitative methodologies to pivot project focus
- Developed interfaces to stream real-time acceleration and heart rate data from Polar Sense sensors to Android app.

Projects

FinUnies | *React*, *Node*, *Express*, *Mapbox API*, *MongoDB*, *Docker* | ***Github Source***

- Designed and developed an interactive geospatial application using Mapbox to visualize universities across Finland on an interactive map
- Built scalable frontend architecture with Next.js and TypeScript, focusing on reusable, component-driven design
- Implemented state management with Redux, ensuring maintainability and consistency across the application

Github Lookup | *React*, *TailwindCSS*, *Github API* | ***Github Source***

- Built a GitHub lookup application using Next.js, Tailwind CSS, and GitHub API to search users and visualize profile data and activity
- Implemented dynamic search and data fetching to display repositories, contributions, and user statistics in real time
- Designed a responsive and intuitive UI, optimizing performance and user experience for seamless navigation across user profiles

Technical Skills

Languages: JavaScript, TypeScript, HTML, CSS, SCSS, SQL
Technologies: React, Next.js, Redux, React Query, Node.js, Express, Contentful, REST API, React Hooks, Tailwind CSS, Android SDK, Firebase
Tools & Concepts: GitHub, Docker, Figma, Postman, Jira, Jest, Responsive Design, Component Reusability
