

KAUNG HTET KYAW

FULLSTACK DEVELOPER

Bangkok, Thailand | [kaunghtetkyaw.com](https://www.linkedin.com/in/kaunghtetkyaw02749@gmail.com) | kaunghtetkyaw02749@gmail.com

<https://www.linkedin.com/in/kaunghtetkyawsama/>

Senior Fullstack Developer with 5+ years building scalable web applications using Node.js, React, Go, and AWS. Expert in developing secure APIs, responsive frontends, and database optimization across MongoDB, PostgreSQL, and GraphQL. Proven ability to deliver technical solutions aligned with business objectives through cross-functional collaboration.

PROFESSIONAL EXPERIENCE

Kubegrade

March 2025 - Present

- Architected comprehensive K8s management platform with React/Next.js frontend and Go microservices, reducing enterprise downtime by 6x and manual effort by 70% through intelligent automation
- Engineered agentic AI workflows that autonomously detect compatibility issues, predict upgrade failures, and execute intelligent remediation across multi-cloud Kubernetes environments
- Implemented GitOps continuous deployment pipelines using ArgoCD to maintain declarative infrastructure state, enabling automated rollbacks and eliminating configuration drift
- Built interactive visualization tools with predictive scaling capabilities that leverage ML models to forecast workload spikes and autonomously scale deployments ahead of demand
- Designed microservice architecture with containerized Go services and GitOps workflows, improving system scalability by 40% and ensuring consistent deployments across environments
- Pioneered self-healing infrastructure automation positioning Kubegrade at the forefront of autonomous operations as Kubernetes adoption accelerates toward 90% by 2030

VisibleOne

May 2022 - March 2025

- Engineered custom CMS with React, Next.js, and GraphQL featuring visual drag-and-drop editing, multi-region publishing, and granular content controls — slashing internal team publishing time by 40%.
- Developed an ERP system for HR and management teams, providing a seamless interface to visualize employee performance, improving decision-making processes and increasing overall HR operational efficiency by 80%
- Integrated an omnichannel CRM system to centralize client communications across platforms like WhatsApp and RocketChat, enhancing team collaboration and reducing response times by 25%.
- MinIO, and WebSocket, enabling real-time tracking of activity, downtime, screenshots, and logs. Integrated it into the HR and Project Management System, streamlining reporting and compliance. Engineered backend microservices with Go and PostgreSQL, handling high-volume cluster metadata processing and real-time monitoring data aggregation
- Enhanced productivity for the WordPress development team by building a registry and CLI with Node.js, React, and Next.js, enabling the reusability of WordPress components across multiple client projects, reducing development time per project.

Appvantage

November 2021 - February 2025

- Engineered custom CMS with React, Next.js, and GraphQL featuring visual drag-and-drop editing, multi-region publishing, and granular content controls — slashing internal team publishing time by 40%.
- Delivered customized product enhancements for Porsche Middle East, aligning features with market-specific requirements and brand standards, resulting in increase of customer satisfaction.
- Integrated MyInfo APIs for secure personal data management, ensuring compliance with privacy regulations and facilitating seamless, secure transactions, improving user trust and reducing transaction errors.
- Built banking and financial integrations with institutions like DBS and HLF, streamlining the financing process and reducing approval time by 40%, enhancing partnerships and accelerating transaction cycles.

EDUCATION

Bachelor of Science in Computer Engineering and Information Technology December 2016 - April 2020

Mandalay Technological University

- Major in Computer Science.
- Minor in Mathematics, Networking, Mechanics, Digital Engineering, Operating System

CERTIFICATIONS

CS50: Introduction to Computer Science | Harvard University

2021

- Implemented Caesar cipher and Vigenère cryptographic algorithms for secure data transmission protocols
- Developed DNA profiling systems using STR pattern matching for genetic identification and forensic analysis
- Engineered Tideman ranked-choice voting algorithms with graph theory and cycle detection for electoral systems
- Built high-performance spell-checkers using optimized hash tables for O(1) dictionary lookups
- Created computer vision filters including edge detection, Gaussian blur, and Sobel operators for image processing
- Developed financial trading platforms with real-time stock APIs and portfolio management systems
- Implemented digital forensics tools for JPEG recovery using file carving and hexadecimal analysis
- Built NLP algorithms including Coleman-Liau readability analysis for automated text assessment
- Engineered memory management systems with dynamic allocation and buffer overflow prevention
