TypeScript, Figma, React.js, Next.js,
Solid.js, Cypress, Playwright,
vitest, jest

Backend:

Node, Next.js, PHP, Postgres, MySQL

Devops:

Docker, GitLab CI/CD

Utilities:

Various AI tools, git, npm, linux,
bash

Languages

Czech: native

English: active

German: passive

Interests

Sports, 3D printing

Work

Cookielab

Fullstack developer

My journey in Cookielab started with working in a small team for Kiwi.com delivering frontend parts of the product. Then I contributed for various smaller projects. For a few months I helped bootstrap a "Influencers" product for a media research tool Ravineo. Next project here was Carvago, a platform for aggregating used cars to sell online. And my last stop is FaceUp, a whistleblowing platform.

(2022-09-01 - now)

FIEDLER AMS

Fullstack developer

FIEDLER is a small company developing IoT devices used in meteorology. Focusing mainly on frontend I was part of team developing newly designed cloud platform for data access and device configuration.

(2013-02-01 - 2022-08-31)

Projects

SCADA screen for water industry usage

Bachelor thesis project, graded excellent. HMI part of SCADA system written in Aurelia.js

SK Rudolfov - soccer club's website

Presentation website for local sports club. Written in Next.js using Wordpress as a headless CMS.

Šličta - restaurant's menus

Website aggregating favorite restaurant's menus at one place written in Next.js.

Middleman UIkit documentation template

Theme template for static site generator Middleman. Mainly for documentation purposes, supports few layouts and some useful tools. Ready for GitLab static site editor.

UIkit icons extended

Extended icons pack for UIkit.

Publications

Mock Service Worker - usage for development and testing

Presentation of MSW, a tool for mocking requests in development and testing of FE applications. Presented at Frontkon 2024 conference.
