

Jim Leirvik

Senior systems engineer with 10+ years of experience designing, building, and evolving business-critical software across backend, frontend, and platform domains.

I focus on system architecture, operational reliability, and improving how software supports real-world workflows—particularly in complex, integrated, or regulated environments.

Across my career I've consistently worked on platform modernization, workflow automation, system integration, and quality improvements. My strength lies in shaping how systems are structured and operated, not just delivering isolated features.

Hands-on across Java, Kotlin, Python, PHP, Node.js, React, TypeScript, Angular, PostgreSQL, MySQL, Docker, Kubernetes, AWS, and Azure DevOps, with experience in API integration, CI/CD, and test automation.

Work

Jun 2025 - Present Edlib AS, Developer

Fullstack engineer working on high-complexity systems in a regulated and operationally critical domain.

- Led the design and rollout of a Django-based platform, defining architecture, development structure, and workflows for scalable delivery across teams.
- Contributed to backend modernization efforts, introducing Kotlin as the preferred language for new and incremental backend development alongside existing Java services.
- Developed and maintained Java backend services and Angular frontends for business-critical and regulated systems, focusing on stability, maintainability, and operational reliability.
- Owned the technical design and implementation of a core subsystem within the company's self-onboarding initiative: a form builder used to define onboarding workflows across divisions.
- Designed and implemented a form builder supporting conditional logic (e.g. dynamic resource creation based on user input), reusable components, and cross-division sharing of configurations, replacing manual processes previously handled by operations teams.
- Contributed to ISO-related quality and security processes through documentation, testing practices, and system improvements supporting audit readiness and reliability.
- Built internal tooling that reduced manual workload and improved operational support workflows.
- Collaborated across disciplines to align technical solutions with real operational requirements in a healthcare-related environment.
- Supported CI/CD and release pipelines using Azure DevOps, including build automation and deployment workflows.

May 2023 - Jun 2025 Bilberry Technologies, Developer

Frontend and quality-focused engineer working across legacy and modern systems.

- Owned OKR-driven initiatives to improve system quality and reduce recurring production issues.
- Improved cross-team testing strategy by introducing end-to-end and acceptance testing, increasing deployment confidence.
- Acted as a bridge between product and engineering to improve delivery safety and workflow alignment.

Mar 2022 - Apr 2023 Cerpus AS, Developer

Fullstack developer on an international learning platform with responsibility for product and delivery.

- Led implementation of a design system across platform and components, improving consistency and maintainability.
- Contributed to development and release of browser-based educational applications used internationally in schools.

Jan 2021 - Jan 2022 Ahlsell AS, Tender Manager VA, Northern Region

Lead role in tender processes and cross-organizational coordination across regional operations.

- Led end-to-end tender processes for major regional contracts involving suppliers, customers, and internal teams.
- Participated in initiatives to improve tender management workflows, including CRM and tracking processes, contributing operational insight from hands-on tender execution.

Jan 2016 - Jan 2021 Ahlsell AS, Salesperson VA

Managed client relationships and developed systems supporting tender, sales, and workflow automation.

- Primary responsibility for a procurement agreement covering 13 municipalities in Salten.
- Developed integrations between tender calculation systems and ISY Linker, enabling structured digital offer workflows and reducing manual processing overhead.
- Designed and implemented digital tender tracking systems and workflow automation adopted region-wide, improving consistency and reducing manual coordination effort.
- Managed procurement agreements and customer relationships across municipal and contractor clients,

Skills

Backend Systems

Design and maintain backend services and APIs with strong experience in system integration, data modeling, and distributed systems.

Frontend Development

Build maintainable frontend systems focused on usability, stability, and long-term maintainability.

DevOps

Experience with containerized systems, CI/CD pipelines, and operational deployment workflows.

Security

Interest and practical experience in web and API security, network hardening, and secure system design. Reached the semi-final in Master of Cyber Security at HackCon 2021 (63 of 421 contestants).

Languages

Norwegian (*Native speaker*)

English (*Advanced*)

German (*Beginner*)

Japanese (*Beginner*)

Interests

Nature

Camping, Hiking, Photography

Technology

DevOps, Homelab, Web development

Veteran Cars

Engine and suspension work, Restoration, Veteran car enthusiast

Ice Hockey

Playing and volunteering

including around 50 active accounts.

- Supported implementation of national framework agreements improving workflow efficiency for 200+ customers.

Jan 2015 - Dec 2015 Braathe Gruppen, Developer

Developer on a Symfony-based auction platform with focus on delivery and workflow improvements.

- Delivered features and improvements based on customer requirements.
- Improved development workflows including CI/CD, issue tracking, and version control practices.
- Introduced virtualized development environments for consistency and onboarding speed.

Jan 2013 - Jan 2015 International Software Technology AS, Developer

Part of an international team building and modernizing school administration systems.

- Contributed to modernization of legacy systems through stack upgrades and build tooling improvements.
- Delivered backend features and API integrations in a distributed engineering team.

Jan 2011 - Jan 2013 Leirvik Nett, Consultant

Worked across customer analysis, tender processes, and solution design in domestic and international projects.

- Analyzed customer requirements and contributed to solution design and delivery.
- Managed tender processes and follow-up across multiple client engagements.

2011 - 2011	Manpower (Ahlseil Bodø), Warehouse worker
2009 - 2011	Bodø Taxi, Driver
2006 - 2008	MIX Norsia AS, Owner
2006 - 2006	Bunnpris Stormyra, Sales Associate
2006 - 2006	Nord Norsk Distribusjon, Driver
2004 - 2006	Mix Rønnevikveien AS, Sales Associate

Volunteer

2026 - 2027	Nordland Fylkeskommune, Member of the IT-developer examination board
2010 - 2014	Bodø Ishockeyklubb, Club chair, deputy chair, web administration
2007 - 2012	Club Honda Norge, Deputy chair, web administration, online store

Education

2001 - 2004	Bodø Videregående Skole, Bedriftsøkonomi Allmenne fag
-------------	---

Certificates

2003	Drivers License, Statens Vegvesen
------	-----------------------------------
