About Me:

Words I live by: "A jack of all trades is a master of none, but oftentimes is better than a master of one."

- **Project OneTime:** Developing a 3D low-poly puzzle platformer from scratch, without third-party assets, to experience all facets of game development.
- **Independent Project Experience:** 'Project OneTime' showcases my skills in C#, Unity, and Blender, handling all aspects of game development independently.
- **Skills Expansion:** I am constantly improving my skills in C#, Unity, 3D modelling with Blender, HTML, CSS, JavaScript, and TypeScript.
- **Versatile Developer:** My journey has made me a generalist, but I am open to specializing if given the opportunity.

This is how I show my passion for gaming.

Skills:

Main Programming Languages: C# (Unity)

Other Prog. Languages: TypeScript, Familiar with C++, Blueprint Visual Scripting, Python

Web Development: JavaScript, CSS, HTML, Bootstrap, GreenSock

Main Engine: Unity

Other Engine: Familiar with Unreal Engine 4/5

Software: Visual Studio (IDE), Blender (3D modelling), FileZilla (FTP client), Clip Studio Paint, GIMP

Source Control: GitHub Desktop, Git Extensions

Project Management: Jira

Work Experience:

Tripolis Games, Junior Game Developer | September 2023 - February 2024 (6 months)

- **Coding:** Developed Unity and TypeScript projects for Zepeto (Paintball & DreamCraft), enhancing user experience and gameplay mechanics. Key contributions include:
 - Console logger and bot players with FSM for Paintball.
 - Power-ups with Client/Server synchronization.
 - Implemented resource and tower defence systems for DreamCraft.
- **3D Modelling:** Created 3D assets using Blender for a Roblox project with Coca-Cola. Trained colleagues in 3D modelling techniques.
- **Game Design:** Developed a comprehensive Game Design Document (GDD), providing technical insights and ensuring implementation feasibility.
- **Quality Assurance:** Conducted playtesting, identified bugs, and created detailed Jira tickets for issue tracking.

- **Other:** Collaborated on a Project Proposal for the WHO Zepeto experience and participated in the Zepeto World Game Jam.

Projects:

Project OneTime, Solo Developer | July 2021 - To Present

- **Gameplay Mechanics:** Designed and implemented all gameplay mechanics, including character movement and puzzle-solving.
- **Core Game Systems:** Developed systems such as Save/Load, Dialogue, Power Ups, Input Handling, and UI components.
- **Code Optimization:** Applied design patterns and refactored code to improve performance and maintainability.
- **3D Asset Creation:** Created in-game environments, objects, and characters using Blender.
- **Visual Enhancements:** Enhanced visual quality through effects, lighting, and shaders.
- **Documentation:** Maintained the Game Design Document (GDD) throughout development.
- **Project Management:** Planned, organized assets, and tracked changes using version control.

Portfolio Website, Solo Developer | February 2021 – To Present

- Designed and developed the portfolio website using HTML, CSS, and JavaScript.
- Ensured responsiveness and accessibility across devices.
- Implemented a modal gallery with Bootstrap and an embedded 3D model viewer.

3D Portfolio, Solo Developer | February 2023

- Modelled and textured a 3D gamer room in Blender, including UV mapping and baking.
- Exported the model to Three.js and displayed it in a web browser with WebGL.
- Animated the camera using GreenSock for dynamic viewing.

Education:

Bachelor of Science in Computer Science (Games) | September 2016 – September 2020

University of Brighton, Brighton & Hove, UK
