

LUCA WEIST

GAME DEVELOPER

HELLO@LUCAWEIST.COM | LUCAWEIST.COM

BACKGROUND

I'm Luca, a passionate Game Developer from Germany. I picked up game development in 2019 as a hobby while studying computer science at the University of Bonn, and it quickly became a passion and now more recently also my profession. During the 2 years I've been working professionally as a game developer I've taken on generalist roles, which has allowed me to gain experience in many areas of game development. Primarily I've been focused on gameplay programming, networked features and implementing tooling to accelerate development workflows.

SKILLS

- **Languages:** C#, C, Java, C++, Go, Lua
- **Engines:** Unity (primarily), Godot
- **Backend:** SQLite, MongoDB
- **Other workflow tools:** Git, Blender, Photoshop, Jira, Trello

EXPERIENCE

ARIES | GAME DEVELOPER

SmokeStack Studios, June 2024 – March 2026 (project completed)

Training software for fire incidents and active shooting incidents. In use by fire departments in Texas.

Worked async together with very small international team. Implemented large variety of new gameplay features, both local-only and networked. Implemented many new major systems, incl. dynamic audio occlusion, AI-assisted analysis of radio communications, physically-simulated firehose, and more. Improved and maintained existing features and systems, e.g. NPC AI, room pressure systems, etc.

FARSEER'S DOMAIN | GAME DEVELOPER

Flufflesocket Studios, August 2024 – February 2025

Simultaneous, turn-based MOBA. Worked with medium-sized international team, implementing new gameplay features (e.g. character abilities, status effects) and improving and maintaining existing ones. Also maintained and improved deeper engine systems, e.g. targeting system and round preview system. Implemented various new multiplayer logic, including entire lobby functionality.

EDUCATION

BACHELOR OF SCIENCE, COMPUTER SCIENCE

Rheinische Friedrich-Wilhelms Universität Bonn
(University of Bonn), 2018 – 2022

PROJECTS

- **Basaglia (WIP):** Survival Horror Game with Co-op support (prediction-reconciliation based networking)
- **TMPEffects:** Powerful Unity text effect solution (animations, custom APIs, custom tags, timeline support etc.)
- **PowerChair Simulator:** Proof-of-concept demo of a PowerChair Soccer simulator; to be used for crowdfunding efforts
