SUMMARY

MERN Stack Developer with 1 year of professional experience shipping production full-stack applications for international clients. Built and deployed systems actively used in the UK and USA, and an AI-powered study platform used by 50+ university students. Proficient in React.js, Node.js, Express.js, MongoDB, and RAG-based AI systems using OpenAI API and Pinecone. 1st Place Winner — UCP Web Hackathon.

EXPERIENCE

MERN Stack Developer — Developer Tag

Jun 2025 – Feb 2026

Lahore, Pakistan

- Shipped 6+ production applications end-to-end for local and international clients using the MERN stack
- Designed scalable RESTful APIs with JWT authentication, middleware layers, and MVC architecture across multiple client projects
- Delivered Zest Restaurant Portal to a UK/USA client — multi-tenant system where each restaurant owner independently manages their own restaurant, deals, capacity, and staff access
- Delivered Shopify Inventory & Order Management System — live order tracking, inventory control, and role-based admin dashboard for warehouse and store managers
- Built Strapi-based CMS applications enabling non-technical clients to manage dynamic content without developer involvement
- Resolved production bugs and delivered client landing pages under real deadlines — debugging live issues on shipped applications
- Deployed and maintained all applications on Vercel, Railway, and Render with consistent uptime

Frontend Developer Intern — BeLike IT Group

Jan 2025 – Mar 2025

Lahore, Pakistan

- Built and delivered 3 live client-facing websites — Pak Knowledge School, Indus Grammar School, and BeLike Company — actively used by parents, students, and staff
- Implemented responsive, cross-browser compatible UIs using HTML5, CSS3, and JavaScript with clean UI/UX
- Worked directly with clients to translate requirements into functional interfaces; resolved UI bugs on live production sites

PROJECTS

StudyMate AI — Intelligent Study Assistant [Live ↗](#)

Stack: React.js · Node.js · Express.js · MongoDB · OpenAI API · Pinecone · LangChain · Tailwind CSS · Vercel + Render

- Built a full-stack RAG (Retrieval-Augmented Generation) pipeline used by 50+ university students — enables document-grounded Q&A over uploaded PDFs and PPTX files using OpenAI text-embedding-3-small and Pinecone vector database
- Implemented LangChain RecursiveCharacterTextSplitter with 600-char chunk size and 100-char overlap for semantically coherent text chunking and high-accuracy retrieval
- Engineered GPT-3.5 Turbo prompt architecture with hallucination prevention — system explicitly refuses out-of-scope queries with zero hallucination on within-scope questions
- Developed automated MCQ quiz generation, flashcard creation, and document summarization using structured LLM prompting with JSON-constrained outputs parsed server-side

- Secured all AI API keys server-side — all requests proxied through backend with rate limiting; frontend never directly contacts AI providers

Zest Restaurant Management Portal [GitHub ↗](#)

Stack: React.js · Node.js · Express.js · MongoDB · Socket.io · GSAP · Vercel

- Multi-tenant production system deployed for UK/USA market — each restaurant owner gets isolated access to manage their own restaurant data, deals, and staff independently
- Built role-based auth with protected routes, payment workflows for deal access, and real-time Socket.io chat for staff coordination
- Analytics dashboards give owners live visibility into deals performance and seating capacity; animated UI built with GSAP

Shopify Inventory & Order Management System

Stack: React.js · Node.js · Express.js · MongoDB

- Built real-time order tracking and inventory management system with role-based admin dashboards for warehouse and store managers
- Implemented full CRUD for products and orders with responsive UI and efficient data flow via RESTful APIs

ROM & BIOS Management CMS

Stack: Strapi · React.js · REST APIs · Nginx · FileZilla · Private Server

- Built Strapi backend with custom content models for ROMs, BIOS files, and device categories with React.js frontend
- Deployed on private server — configured Nginx as reverse proxy and managed file transfers via FileZilla

SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, Next.js, Tailwind CSS, GSAP

Backend: Node.js, Express.js, REST APIs, JWT Auth, Socket.io, Strapi

Database: MongoDB, MySQL

AI / ML: OpenAI API, LangChain, Pinecone, RAG, Vector Embeddings, Prompt Engineering

Tools & Platforms: Git, GitHub, Vercel, Railway, Render, Nginx, Postman, VS Code, Slack

EDUCATION

Bachelor of Science in Computer Science (BSCS)

2023 – 2027 (Expected)

University of Central Punjab (UCP) — Lahore, Pakistan

Pursuing BSCS with focus on full-stack web development and AI systems. Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Web Technologies, Artificial Intelligence, Software Engineering, Computer Networks.

AWARDS

- 1st Place — Web Hackathon, University of Central Punjab (UCP) | Competed against and outperformed teams from multiple universities
