About Me

As a self-taught MERN stack developer from Kochi, I specialize in backend-heavy full-stack development, focusing on creating scalable, efficient, and secure server-side applications. My passion for distributed systems and learning new technologies drives my commitment to delivering high-quality solutions.

Education

BROTOTYPE , MERN Full Stack Development	March 2024 – Present
Govt. HSS, Edappally Ernakulam, Higher Secondary in Commerce	June 2022 – March 2024

Technologies

Expertise: JavaScript, TypeScript, Node.js, Express.js, Next.js, React.js, PostgreSQL, MongoDB, GraphQL, RESTful APIs, Redux, Socket.io, MVC Architecture, SOLID Principles, Clean Architecture, DSA (Data Structures and Algorithms)

Also Used: JWT, TanStack Query, Zustand, CI/CD, Postman, Tailwind CSS, Bootstrap, Figma, Git

Integrations: Stripe, Razorpay, PayPal, Cloundinary, WebHooks, AWS, GDC, Nginx, Firebase, OAuth2.0, Clerk Authentication, Nodemailer, Multer

Experience

Professional Development Program , Packapeer Academy	June 2024 – Present
---	---------------------

Engaged in a comprehensive self-learning program featuring hands-on projects, personalized mentorship from industry experts, weekly performance reviews, and real-world applications, fostering innovative problem-solving, technical proficiency, and a commitment to continuous improvement.

Projects

Bella Imagine, Photography Services and Booking Platform	Frontend Backend
---	--------------------

- **Comprehensive Booking Platform:** Created a platform connecting users with photographers, allowing them to discover local professionals, view portfolios, and book sessions seamlessly
- **Robust Backend:** Built a scalable Express.js backend with MongoDB, implementing JWT for authentication, Socket.IO for real-time chat, and Redis for caching.
- **Clean Architecture:** Followed Clean Architecture and SOLID principles for maintainability, scalability, and modular development.
- **Features**
 - User Experience Enhancements: Implemented advanced filtering options, allowing users to discover nearby photographers based on location.
 - Real-Time Functionality: Integrated Socket.IO for chat, push notifications, and media sharing.
 - Deployment Pipeline: Configured CI/CD pipeline and hosted on AWS EC2 with Winston logger for monitoring.
 - Designed complex service creation workflows, enabling photographers to offer customizable packages, attach work samples, and manage availability with ease.
 - Implemented Stripe for secure, flexible payments, allowing both clients and photographers to manage bookings and transactions reliably.
 - Added location intelligence with Google Maps API for place selection and Google Distance Matrix API for

calculating the distance of the custom service location.

- Built interactive community for users inspired by Reddit, post, like and comment to boost engagement

Technologies Used

Backend: Express.js, TypeScript, Node.js, Mongoose (MongoDB), JWT, Socket.IO, Redis, UUID, Stripe, S3 Bucket, Winston Logger

Frontend: React, TypeScript, Redux Toolkit, React Query, Stripe, Google Map

DevOps and Tools: AWS EC2, CI/CD Pipeline, Git, GitHub, Postman (API testing)

Also Used: Clean Architecture, SOLID Principles

Savage, E-commerce Website

GitHub

- **Specialized E-commerce Platform:** Built a Node.js and Express-based backend for an e-commerce platform featuring custom T-shirt design with Canva-style integration
- **Scalable Backend:** Implemented server-side rendering using EJS as the templating engine to deliver dynamic product and design pages efficiently
- **Efficient Architecture:** Followed MVC principles for better scalability, maintainability, and streamlined feature development.
- **Features**
 - User Experience Enhancements: Implemented offers, coupons, wishlist, wallet, carts, and referral.
 - Seamless Payment Processing: Integrated Razorpay for secure payments and ensured OTP confirmation via Node-Mailer for enhanced security.
 - Order Management: Enabled order tracking and invoice generation.

Technologies Used

Backend: Express, Node, MongoDB, MVC Architecture, Bcrypt

Frontend: EJS (Template Engine), HTML5, CSS3, JavaScript, Bootstrap, Ajax

DevOps and Tools: Git, GitHub, Postman (API testing), Prettier (code formatting).

Also Used: AWS, Razorpay, Ajax, OAuth2.0, Cloudinary, Passport.js
