About Me

Highly motivated and results-driven **Mobile & Web Developer** with a proven track record of success in delivering innovative, efficient and effective user experiences. My ability to effectively communicate technical concepts to both technical and non-technical stakeholders has been a key factor in my success. My passion for staying up-to-date with the latest technologies ensures that I can always bring new ideas and solutions to the table.

Skills

Javascript, Typescript, React Native, React.js, Next.js, Reanimated, Skia, React Query, Redux, Redux Saga, Redux Toolkit, Firebase, HTML, CSS(SASS), Tailwind CSS, Styled Components, Styled System, Adobe Illustrator

Experience

Software Engineer

Nov 2023 – Apr 2025

Sanius Health | Remote

- Led the development and deployment of multiple mobile applications, including Sanius Health (SCD), My CML+, My MM, and My CLL apps, ensuring smooth operation and timely updates.
- Implemented and optimised crucial features across several apps, such as notification systems, onboarding flows, PDF generation, etc., improving user experience and engagement.
- Regularly collaborated with stakeholders, including developers, designers, and product managers, to troubleshoot issues, push builds, and ensure the successful implementation of new features.
- Provided technical guidance to team members, assisting with build processes, library integration, and code reviews.
- Streamlined app configuration processes by moving settings like notifications, export data, and environment variables to centralised config files, ensuring easier maintenance and scalability.
- Integrated Fastlane to automate the development and release workflow.
- Involved in the interviews for React & React Native developer roles.
- Implemented a Pain Point Selection Component in which patients can select specific areas in the human body (using SVG) to highlight pain.
- Implemented a Year End Review feature using Skia and Reanimated, which presents a summary of analytics and data from the previous year.

Mobile App Developer

Jan 2023 – June 2023

Zdaly | Remote

- Contributed to the design, architecture, development, and publishing of two React Native projects (PriceEasy & BP Site Optimiser).
- Implemented a mapping solution for the applications which provides information on the nearest fuel competitors based on the user's currently selected station.
- Streamlined the onboarding process for users by using dynamic links (sent via SMS). App-specific deep links were used for the implementation.
- Implemented a survey system in which a survey can be done using dynamic links sent via SMS.
- Integrated Fastlane to automate the development and release workflow.
- Involved in the code reviews of React Native Developers across two products.

Software Engineer
BigBinary | Remote

Mar 2021 – Dec 2022

- Collaborated on a React Native Template. It helped save project setup time, bringing it anywhere from 4 to 8 hours to just one command.
- Collaborated on React Native training guide & best practice articles that helped save hours of code review time.
- Involved in the training, onboarding & code reviews of React Native interns.
- Integrated Fastlane to automate the development and release workflow for several applications.
- Implemented a Rich Text Editor for mobile applications.
- Collaborated on React Native Component library to save development time and to make UI consistent across applications.
- Contributed to the design, architecture, development, and publishing of several React/React Native projects.

Software Developer
Appeneure Technologies | Remote

Jun 2020 – Feb 2021

- Worked on various projects on React, React Native and Firebase.
- Worked on implementing a live tracking feature with Google Maps for tracking delivery vehicles.
- Redesigned the entire mobile app UI (JsTips & CryptoCurrency), resulting in around a 20% increase in average app rating and over 90% reduction in inconsistency issues reported by the users.

UI Developer
Western International Group | Remote

Dec 2019 – Jun 2020

- Solely worked on implementing the complete front end of an e-commerce website (wigme.com) and an admin tool (omnycomm.com) to change every aspect of the website (e.g., fonts, theme, banners, etc.)
- Involved in the requirement gathering phase with the business users and dealing with UX single-handedly to continuously accommodate changing user requirements.
- Translated the team's UX requirements into responsive, interactive features, using HTML/CSS/Sass/React and Redux.
- Implemented Initial setup and component migration to Redux for the product.
- Created a drag & drop tool with Canvas for the purchasing team to create flyers, which resulted in reducing the time to create flyers to 20 minutes from 4 hours.
