PROFESSIONAL SUMMARY

Emerging Network and Cloud Infrastructure Professional specializing in Information Security, seeking to apply expertise in enterprise networking, Windows Server administration, and cloud infrastructure. Driven to contribute to a collaborative team while implementing modern, secure, and scalable technology solutions.

WORK EXPERIENCE

TELUS Digital

March – June 2026 (Voluntary)

IT Support Tier 2 Operations Intern | Mckinley West, Taguig

- Streamlined corporate endpoint management by administering Active Directory (AD) Group Policies and hardware/software asset inventory, effectively resolving complex Tier 2 technical escalations.
- Engineered a high-speed deployment lab using FOG Project and L3 Switches, reducing workstation imaging time by over 60%.
- Configured and maintained lab networking equipment, focusing on VLAN segmentation and routing to ensure 99.9% uptime for imaging and testing environments.

PROJECTS

Autonomous Hybrid-SecOps Ecosystem

June 2026

Cloud Security & Infrastructure Engineer

- Architected a hybrid zero-trust enterprise infrastructure across 3 isolated security zones combining Cisco L2/L3 fabrics, a Dockerized Wazuh SIEM (4-node container stack), and 5 AWS cloud services (IAM, S3, SSM, SNS, CloudWatch) driven by Terraform IaC.
- Engineered a Python-based automated incident response framework using Netmiko and Boto3, achieving sub-second ACL enforcement to dynamically block brute-force threat vectors with zero hardcoded credentials (SSM-backed secrets).
- Implemented DevSecOps CI/CD pipelines via GitHub Actions with Checkov SAST scanning, blocking 100% of overly-permissive firewall rules to enforce strict least-privilege deployments.

DHL Enterprise Network Simulation

April – June 2025

Network Engineer

- Architected a high-fidelity Enterprise Network (DHL Simulation) using EVE-NG and Cisco Packet Tracer to emulate a complex, multi-site corporate infrastructure.
- Engineered secure routing and segmentation by implementing OSPF/EIGRP and VLANs, ensuring efficient data paths and 100% network reachability, while hardening architecture using Site-to-Site VPNs, SSH, and Extended ACLs.
- Deployed full-stack network services (DHCP, DNS, FTP, Email, and Web), simulating a production-ready environment with centralized service management.

MemoriA & Bill Fraud Scanner

Nov – Dec 2025

AI & Full-Stack Developer

- Engineered two championship-winning AI healthcare solutions, utilizing Gemini Vision and FaceAPI to secure back-to-back 1st Place victories at AWS Innovation Cup and Ship or Be Shipped.

Homelab DNS Sinkhole

Dec 2025

Security Engineer

- Built a Pi-hole, Unbound, and Tailscale stack blocking 259k+ domains with 0.037 ms DNS latency and 100% uptime, protecting 6 remote/local endpoints.

EDUCATION & TRAINING

University of Makati

2023 – 2027 (Expected)

BS in Information Technology Major in Information and Network Security | Taguig, Metro Manila

- Technical Training:** TESDA NC II - Computer Systems Servicing

CERTIFICATIONS, SKILLS & AWARDS

Skills: Active Directory, Server Management, L2/L3 Switching, VLAN Segmentation, OSPF/EIGRP, Site-to-Site VPN, Network Hardening, ACLs, Python, Terraform, AWS, SIEM (Wazuh)

Certifications: Google IT Support Professional, Google Cybersecurity Professional, ISC2 Certified in Cybersecurity (CC), Cisco IT Customer Basics, Cisco Networking Technician

Awards: Champion – AWS Hackathon Innovation Cup 2025, Champion – Ship or Be Shipped Hackathon 2025, Track Winner – InnOlympics Hackathon 2026, Top 5 Finalist – AGORA Voice AI Hackathon 2026, 2nd Place – InfoTechnolympics 2025 (Computer Networking)
