SUMMARY

A results-driven full-stack Python software developer with proven skills and capacity in developing and delivering tailored python solutions that addresses intricate business challenges. Possessing strong technical expertise in writing, testing, developing and debugging software programs and production-ready systems/services, utilising efficient, scalable software design principles, and best practices.

CORE COMPETENCIES/ SKILLS

- Advanced core Python programming knowledge, data structures, and algorithm development.
- Large-scale Python application development using frameworks like Django, Django Rest Framework, Flask, and FastAPI.
- Full-stack web development with Python, React, Next Js, HTML5, CSS3, JavaScript, and TypeScript.
- Effective software testing and agile test-driven development.
- Event-driven software architectures, distributed systems, and micro-services.
- Containerisation technology using Singularity, Docker, and Kubernetes.
- Development of robust REST and GraphQL APIs with Python (Django, Flask, and FastAPI).
- Object-oriented design and asynchronous programming in Python and JavaScript.
- Data management using both SQL and NoSQL data management systems.
- Version control and code management with Git, for continuous integration and code deployment (CI/CD).
- Cloud technologies and managed services: Microsoft Azure, Amazon Web Services (AWS).
- Infrastructure as code using Terraform and Ansible.
- High performance computing and large-scale workflow management using Linux systems, SLURM, Rose suite and Cylc.

WORK EXPERIENCE

Python Developer

Oct 2022 – Date | Plymouth, GB

PML Applications

- Collaborate with remote sensing scientists and experts, supporting the development and upkeep of various specialised geospatial applications and solutions, delivering earth observation and remote sensing data products, software systems and services.
- Build custom web-based software solutions that aid scientific research and operations.
- Handle multidimensional data processing, storage, and management utilising modern tools such as Open data cube and Xarray.
- Architect sophisticated workflow systems tailored for the processing of satellite images and remote sensing data.
- Facilitate trainings, and offer technical guidance to research scientists, enabling the implementation and adoption of cutting-edge tools and techniques that optimise diverse earth observation and remote sensing projects.

Python Software Developer

Jun 2020 – Oct 2022 | Lagos, Nigeria

Sterling Bank Nigeria Plc

- Functioning as a full-stack python application developer for an enterprise data team, I contributed to, and led the design and development of multiple business applications and APIs that significantly improved the operations of internal customers. Maintaining and evolving large-scale applications and micro-services as per business requirements.
- Conceptualised, developed, and deployed several reliable enterprise software solutions such as a customer and products analytics data platform, an enterprise electronic document management system, a centralised business intelligence suite, as well as other business solutions for internal customers and business teams. Efficiently handling both frontend/backend development using Python Django, Flask, FastAPI, React, and other web-related technologies.
- Designed multiple process automation systems and programs in python that were crucial in automating several business processes, automating high-volume repetitive business tasks and saving several man-hours.
- Worked alongside machine learning engineers and data scientists, and developed and deployed multiple analytics and custom machine-learning models and solutions, through APIs and web applications that significantly enhanced daily business operations.

Junior Python Web Developer

Oct 2018 – May 2020 | Abuja, Nigeria

Alert Technology Limited

- Worked as a python web developer, supporting the development and maintenance of web platforms and applications used in business operations by integrating server-side logic to user-facing features and elements.
- Collaborated cross-departmentally, liaising with stakeholders to understand application requirements and developing backend services Integrated into business web applications using python.
- As an applications support engineer, I managed the installation and maintenance of software applications and several IT solutions for external clients. Improving functionalities of existing systems through reprogramming strategies.

EDUCATION AND CERTIFICATIONS

2018 **B.Sc. Electronics and Electrical Engineering** - Obafemi Awolowo University, Nigeria.

2022 **Full Stack Developer Nanodegree** - Udacity.

2021 **Robotic Process Automation Developer Course Level I & II** - Robocorp.

NOTABLE PROJECTS

- Designed the developed a satellite image data processing system for the Copernicus evolution research for harmonised and transitional water observation project (CERTO)
- Developed a complete customer intelligence and products analytics suite for Sterling Bank Nigeria Plc.
- Developed a centralised Business Intelligence Suite and Digital Data Library for Sterling Bank Nigeria Plc.
- Implemented several large-scale RPA process automation solutions.

TECHNOLOGIES

Python, JavaScript, Django, Django Rest Framework, Flask, FastAPI, HTML5, CSS3, React, Next Js, Redux, SQL, ORM, Alembic, MySQL, PostgreSQL, SQL Server, MongoDB, Redis, Redis Streams, RabbitMQ, Celery, Docker, Kubernetes, AWS, Azure, Terraform, Ansible, Pytest, Unittest, Git, REST API, GraphQL, Linux systems, Slurm computing, Rose suite, Cylc.
