

Matheus Tura

Backend Software Developer

Software developer with 5+ years professional experience and 2 years as a Backend Developer, graduated from one of the top 10 best ranked universities in Latin America. Specialized in AWS, worked on sensitive migrations and cloud cost reductions, from financials to cybersecurity. Opinionated in favor of clean code, test-driven development and infrastructure as code for best practices.

EXPERIENCE

Axur Cyber Security — Java Backend Developer

MAY 2020 - OCT 2021

Brand protection, threat intelligence, automatic digital fraud detection and removal

- Reduced S3 costs migrating 100s of Terabytes from Standard to Glacier.
- Migrated and updated sensitive third-party services with almost zero down-time.
- Developed a multithreaded java microservice increasing throughput capability from few thousands to hundreds of thousands packets per second.
- Promoted and applied a microservice endpoint load-test using Python Locust, resulting in a data-driven choice for upper limit endpoint parameters.

Technologies: Java, Spring, Docker, RabbitMQ, AWS (EC2, ECS, RDS, S3, Lambda, Cloudformation and others), Jenkins, Python, SQL, Event-Driven, Observability

Elysios Smart Agriculture — C# Developer

MAR 2019 - MAY 2020

Mobile app with farm journaling and IoT sensing integration for greenhouse farmers

- Upgraded search algorithm to fuzzy search, boosting accuracy and user experience.
- Created Systemd daemon to remote update java applications on distributed raspberry pis, eliminating manual ssh.
- Designed and created a technician chat with photo exchange capability for incidents.
- Implemented authenticated APIs for weather data using Python Flask.

Technologies: Xamarin, C#, SQLite, MySQL, Python, Flask, Pandas, Linux, Java

Asimov Trading — Python Developer

SEP 2018 - FEB 2019

Low-latency statistical arbitrage, market neutral strategies for cryptocurrency markets

- Coded a market making strategy for Brazilian cryptocurrency exchange, Quantitative analysis model backtested with pandas and numpy, 10~20% MoM.
- Developed an observability dashboard for cloud infrastructure and running strategies (AWS, Gcloud), resulting in fast response time for downtime incidents.
- Researched latency reduction, resulting in less network errors at heavy load periods.

Technologies: Python, Pandas, Dash, Linux, Bash, AWS, Websockets, REST

Nelogica — Delphi Developer

DEC 2016 - AUG 2018

Delphi forms leading trading platform for Brazilian Stocks Exchange, BMF & Bovespa(B3).

- Promoted and implemented a novel News platform, creating a new form of revenue through plugin subscription from different news sources affecting millions of users.
- Introduced a GPU compliant graphics delphi library instead of CPU-only.
- Maintained technical indicators and visual interfaces for risk analysis.

EDUCATION

UFRGS - Bachelor of Computer Engineering

JAN 2011 - JUN 2021 - Brazil

CERTIFICATIONS

AWS Certified Developer Associate

AWS Certified Cloud Practitioner

SKILLS

AWS, Docker, Python, Java, Test-Driven Development, CI/CD, Linux, Cloudformation, Microservices, Bash

AWARDS

Student Innovation Challenge
IEEE World Haptics Conference
2015, Chicago, Third Place

Vex First Place Team, Excellence Awards

Vex Robotics Competition - Round Up, 2010, Brazil, First Place

LANGUAGES

Portuguese- Native
English – Bilingual Proficiency

CITIZENSHIPS

Brazilian
Italian

INTERESTS

DevOps, Microservices, Linux, Data Science, Cryptocurrencies.
