SUMMARY

Software Engineer and **Educator** with a track record of designing high-scale systems and curiosity-driven learning. Currently optimizing for NoSQL demand while scaling back hardware dependencies due to chip shortages. Previously founded **OnePercent Software**, building an educational ecosystem with **1.5M+ app downloads** and **150K+ active users**.

ACHIEVEMENTS

- **60+ Apps:** Developed and launched **60** on PlayStore and AppStore.
- **1.5 Million+ Downloads:** The Applications have **150,000+ Active Users** and **1,500,000+ Downloads**.
- **Lectures:** Delivered **10+ Lectures** in college on various topics such as Data Science, DBMS, FullStack Development, etc.
- **Author:** Authored the book "The Final Invention" and published research across fields like Technology & Education.

EDUCATION

New York University Master of Science in Computer Engineering (MS)	<i>New York City, USA</i> 2024 – 2025
RV College of Engineering Master of Computer Applications (MCA)	<i>Bangalore, India</i> 2022 – 2024
Narsee Monjee Institute of Management Studies (Distance) Master of Business Administration (MBA), Information Technology and Systems Management	<i>Mumbai, India</i> 2022 – 2024
St. Joseph's College Bachelor of Computer Applications (BCA)	<i>Bangalore, India</i> 2019 – 2022

EXPERIENCE

Software Engineer Amazon (AWS), Seattle, USA	Feb 2026 – Present
• Optimizing architectural efficiency to meet the surging global demand for NoSQL databases while strategically scaling back hardware dependencies amidst global chip shortages.	
Software Engineering Intern Amazon (AWS), Seattle, USA	May 2025 – Aug 2025
• Engineered a backward-compatible checksum system significantly enhancing data integrity and service reliability while keeping latency impact under 1% .	
AI Engineering Intern Volvo Cars, Bangalore, India	Feb 2024 – July 2024
• Designed an AI solution to automatically correct XPath errors based on similarity scores, reducing false alarms by 60% , and received a Referral Letter from the Head of Volvo India for contributions to AI-driven test automation advancements.	
Research Intern Indian Institute of Science, Bangalore, India	Nov 2023 – Jan 2024
• Worked on a research project focused on semantically detecting Git conflicts and improving merge accuracy by collecting and building 125+ Java repositories, resolving build failures across Maven, Gradle, Ant, and other build tools.	
Founder and Director OnePercent Software Private Limited, Bangalore, India	Aug 2020 – Aug 2024
• Founded OnePercent to address shortcomings in traditional methods where I developed and launched 60+ Mobile Apps with 1.5+ Downloads and 150K+ Active Users to make education more engaging and effective.	

PUBLICATIONS

Harnessing the Power of Curiosity: A Pathway to Success and Fulfillment White Paper	Zenodo Link
Secure, Private and Transparent Messaging on a Public Blockchain Conference: Computation System and Information Technology for Sustainable Solutions	IEEE Xplore Link
Efficient Storage and Analysis of Videos through Motion-Based Frame Removal Conference: Contemporary Computing and Communications	IEEE Xplore Link
Maximizing Shelf Life Efficiency: Enhancing Sustainability through Smart Food Processing Conference: Emerging Technologies in Computer Science for Interdisciplinary Applications	IEEE Xplore Link

SKILLS

Programming Languages: PHP, Dart, Python, Java, JavaScript, SQL, R, MATLAB, C, C++, C#, HTML, CSS, XML
Frameworks and SDKs: Laravel, Flutter, Bootstrap, Spring, VueJS, Django, Git, Docker, MySQL, MongoDB, PostgreSQL
AWS Cloud: EC2, RDS, DynamoDB, S3, SNS, API, SES, Lambda, IAM, CloudWatch, VPC, EFS, Lightsail, Route 53
ML Libraries: TensorFlow, Keras, PyTorch, Scikit-Learn, Gensim, OpenCV, NLTK, Matplotlib, Seaborn, NumPy, Pandas
Big Data and Visualization: Tableau, Power BI, Hadoop, Apache Spark, Hive, Kafka, Pig, Snowflake
Computer Science Fundamentals: Data Structures & Algorithms, OOPs Concepts, REST APIs, System Design Concepts

PROJECTS

Message+: Developed a feature-rich messaging app with end-to-end encryption, offline storage, analytics, and customizable themes, achieving 10,000+ downloads. Built with Flutter, Laravel, SQLite/MySQL, and AWS (EC2, RDS, DynamoDB, Lambda, S3, SNS) for a scalable cross-platform experience.

UpSkill: A learning platform offering interactive tutorials, code snippets, quizzes, and interview preparation across 15 programming languages. Designed for comprehensive programming education with structured learning paths and in-app assessments.

Compile+: Mobile compiler enabling code execution in 15 programming languages using Docker-based containerization for secure, lightweight, real-time compilation.

Fit+: Advanced fitness tracker with progress visualization, customizable workouts, and detailed exercise tracking, featuring progress graphs, workout templates, and metric/imperial customization.

Edutech: A hybrid education platform combining the features of Brightspace and Gradescope for seamless teaching, grading, and analytics. Built in Laravel with relational databases, a data warehouse, visual dashboards, and an intuitive UI.

Split+: An enhanced expense management app, featuring smart grouping, AI-based expense insights, and debt optimization for effortless financial tracking.

AI-Driven XPath Correction for Test Automation: AI-based XPath correction tool built at Volvo to enhance test reliability using logistic regression and SLSQP optimization, reducing false alarms by 60%.

Motion-Based Video Compression: Video optimization system for surveillance footage that removes redundant frames, achieving up to 85% reduction in storage for low-motion videos.

Resume Builder: Automated resume generation platform that imports profile data and creates ATS-optimized resumes with customizable templates, LinkedIn import, and instant formatting.

Games: A collection of engaging mobile games including Chess, Sudoku, Tic-Tac-Toe, Snake, Memory, and Minefield, developed in Flutter with adaptive UIs and custom-trained AI opponents.
