ABOUT

A Software Developer with over 2 years of experience in building Fullstack applications. Experienced in developing intuitive UIs, robust REST APIs, Microservices, and RAG-based applications. Driven to explore cutting-edge technologies and frameworks. Striving to build scalable and efficient applications that address real-world challenges. Always eager to take on new challenges and contribute to innovative projects.

EXPERIENCE

Associate Software Engineer

AMNIL Technologies Pvt. Ltd.

September 2023 - Present | Manbawan, Lalitpur

- Played a significant role in the development of RAG-based Generative AI chatbot using OpenAI, Langchain, ChromaDB, WeaviateDB, enabling realtime streaming using Server-Sent Events(SSE) for enhanced user experience.
- Built file explorer UI and APIs for handling data ingestion from various sources such as Remote FTP Servers, AWS S3 Buckets, and local files, ensuring seamless integration with the chatbot system.
- Collaborated with cross functional teams in the development and maintenance of in-house chatbot application, focusing on enhancing user experience and system performance.
- Implemented BullMQ for managing ingestion, crawl jobs and scheduling tasks, ensuring efficient processing and management of data within the chatbot system.
- Integrated AI microservices with the chatbot application, enabling advanced AI capabilities and improving overall functionality.
- Contributed to handling scaling of the application by implementing efficient data handling and use of Redis Pub/Sub for Real-time data synchronization across clusters.
- Worked on enhancing the messaging platform for multi-channel support and enhance the content-type support for different social media platforms.

MERN Stack Developer Intern

Mervix Technologies Pvt. Ltd.

March 2023 – June 2023 | Budhanilkantha, Kathmandu

- Worked on resolving bugs and implementing new features in Urban Health Center Data Management System, a web application for managing health data of urban health centers in Nepal.
- Worked on Multimedia Management System for managing multimedia content, including images and videos, for use in portfolio websites. Resolved bugs and ensured smooth functionality of the application.

EDUCATION

Bachelor of Science in Computer Science and Information Technology (B.Sc. CSIT)

Tribhuvan University

2020 – 2024

PROJECTS

Tumor Insight

- Developed Tumor Insight to detect and classify tumors in brain MRI images using deep learning technique
- Utilized VGG16 and ResNet50 models for image classification, with a backend built on Flask and PostgreSQL, and a Frontend developed using React.

SKILLS

Programming Languages

JavaScript | TypeScript | NodeJS

Frameworks & Libraries

LoopBack | NestJS | Express | React
Langchain | LlamaIndex

Databases

PostgreSQL | MongoDB | Redis
ChromaDB | WeaviateDB

Tools & Platforms

Docker | Portainer | Jenkins
BullMQ | Git

Concepts & Methodologies

Microservices
REST APIs | Generative AI
RAG (Retrieval Augmented Generation)
Server-Sent Events (SSE)
