PROFILE

I build for Android and beyond. My work is centered on Kotlin, along with KMP and Flutter for multiplatform development. I'm also an open-source contributor, occasional blogger, and French learner.

PROFESSIONAL EXPERIENCE

Senior Android Developer at [Fapna](#) | March 2025 – Feb 2026

- Designed and shipped a robust parental control system from the ground up, implementing low-latency tracking for location, battery, and communications across child devices.
- Expanded market reach by 36% by re-engineering a legacy Android application to support a wider ecosystem of OS versions while maintaining strict feature parity.

Mobile App Developer at [Noviner](#) | Apr 2024 – Dec 2024

- Engineered a multilingual, cross-platform application for a premier UAE online clinic, simplifying the patient journey from doctor discovery to lab test booking.

Freelance Android Developer on [Upwork](#) | Dec 2023 – Apr 2024

- Maintained a 5-star rating across five Kotlin projects, cited by international clients for exceptional code quality, communication, and strict adherence to delivery milestones.

Junior Android Developer at [Borhan Mobin](#) | Jul 2022 – Oct 2023

- Delivered a high-traffic soccer ticketing app capable of sustaining 20K concurrent users during peak events; utilizing Firebase analytics and monitoring to maintain system stability and rapid error resolution.
- Accelerated stadium entry by building an internal Android POS application for stadium staff to validate and print tickets, significantly improving gate processing efficiency and reducing manual errors.

TECHNICAL SKILLS

Languages: Kotlin, Dart

Frameworks: Jetpack Compose, Flutter, Kotlin Multiplatform

Architecture/Design patterns: Clean, Dependency Injection, Lazy Initialization, MVVM, Observer, Repository, Singleton

Backend-as-a-Service: Firebase, Aptabase

Communication APIs: RESTful, WebSocket

Version Control: Git

Libraries: ACRA, Commons IO, Coil, Dio, GetX, Hilt, Koin, Ktor, LeakCanary, ML Kit, Retrofit, Room, Vosk, whisper.cpp, Zxing and etc.

OPEN-SOURCE PROJECTS

[Filester](#)

A secure, accessible cloud storage app for Android with 160+ stars on GitHub. Available for download on F-Droid and Xiaomi GetApps.

[SuperWebView](#)

A feature-rich WebView app built entirely with Kotlin and Jetpack Compose.

CERTIFICATES

[Version Control with Git](#)

Atlassian | Jul 2023

[Programming with JavaScript](#)

Meta | Jun 2023
