English

PROFESSIONAL SUMMARY

Senior Software Engineer (Rails/React) with experience in delivering expert design, building, testing, and maintenance of software systems, analyzing and translating complex customer requirements and business problems into innovative custom solutions. Whether as an individual contributor or a collaborative team member (pair programming), I prioritize adaptability, clean code, and measurable impact.

EMPLOYMENT HISTORY

Senior Software Engineer at AutoRaptor, San Francisco

Feb 2026

AutoRaptor is a company that provides a dealer-focused CRM platform designed to help independent and BHPH auto dealerships streamline sales processes, manage leads, and improve customer relationships.

During this time, I have participated in the following projects:

Project: Core CRM Improvements

Enhancement of the core CRM application.

Main tasks executed in the project:

- Refactoring of core Ruby classes and modules to improve code quality and maintainability
- Analysis, design, and implementation of new features
- Bug fixing and production support

Senior FullStack Engineer at Career.io, New York City

Jan 2024 — Dec 2025

Career.io is a company that provides a suite of technology-enabled career services that equip professionals with the tools to best showcase their experience and potential.

During this time, I participated in the following projects:

Project: Resume builder project

Implementing new backend features for the *Resume Builder* application as the following:

- LinkedIn integration
- GPT Parser integration
- Job Tailoring
- New customization fields

Project: AB Test with VWO

Collaborating with the project "AB Test with VWO" to implement the "Make permanent" option to override campaign variations.

Implementing AB test variation assignment for anonymous user

Project: Career Assessment

Architecture design and implementation of a new feature application that interacts with clients by means of a chatbox experience to gather career user information in order

to make an integration with a third party API that use an AI model to process the information.

Project: Career Profile

Architecture design and implementation of a new application form to gather professional user experience and consolidate a unified source of data to be shared to several internal service.

Project: Refactoring of an API wrapper to third party Career Data API

Refactor the legacy API wrapper that interacts with the third-party *Career DATA API* from non-REST to fully REST compliance, considering the redesign of RSpec tests, VCR implementation, and swagger documentation.

Project: Resume.io Integration with TopResume API to allow resume critiques in non English languages

Adapt main core app to integrate with the third-party TopResume API to allow professional reviews for resumes in German and French languages

Project: CarrierWave gem upgrade and Ruby-vips migration

Upgrade the carrierwave gem to the last version which is a critical feature for the App due to the extensive use of uploading files. As part of the migration the repo is replacing ImageMagick library with Libvips.

Software Engineer at Kin Insurance, Chicago

Jul 2021 — Jun 2023

Kin is an insurance company that provides homeowners insurance in states where coverage is difficult to obtain because of the higher likelihood of natural disasters.

During this time, I participated in the following projects:

Project: Expansion products

Technical setup for opening operations in new USA states fulfilling the following task:

- Adjustment, refactoring, and creation of core Ruby classes and libraries for product configurations
- Database setup for new insurance products
- Implementation of new insurance filings in the rater API system
- Product backlog analysis

Project: Red Team

Temporary team with specific responsibilities to fulfill the following tasks:

- Implementing accounting features
- Production support bug fixing

Project: Ducks Team

Insurance policies are associated with several PDF forms. The project was intended to assume full control of maintenance, improvements, and coding on the core libraries for PDF generation.

Main tasks executed in the project:

- Analysis and recommendations on key technical and architectural directions.
- Implementing new PDF forms
- Improvement in testing strategies.
- Rails database migrations strategies for PDF regeneration

Project: PDF Meta-Tests

Abstract PDF regression test to allow the inclusion of new PDF test cases (documents) without human intervention (no need for engineers to create new test files)

Main tasks executed in the project:

- Analysis and design of the solution

- REST API for data extraction
- Implementation of testing workflows

Senior Software Engineer at RocketPin SPA, Santiago de Chile - Chile

Aug 2017 — Jul 2021

Rocketpin is a company specializing in services on demand for address verification, car inspections, company audits, collection notices, and home signatures, among others.

During this time, I participated in the following projects:

Project: Core Maintenance

Enhancement of the core monolith app

Main tasks executed in the project:

- Refactoring of core Ruby classes
- Analysis, design, and implementation of new features
- Database administration (RDS PostgreSQL / Atlas MongoDB)
- Linux System Administration (services deployment)

Project: Sidekiq workers server migration

Decoupling of Sidekiq workers from monolith server to a separate dedicated server

Main tasks executed in the project:

- Scripting for EC2 server setup with boto3 and ansible
- Redis Setup
- Sidekiq worker setup
- Cronjob tasks migration

Project: Equifax and Rocketpin Integration

Full development life cycle of an integration Web application to extract, transform, and send information from the Rocketpin core app to the *Equifax Chile* API in order to integrate business and workflows with the Equifax company.

Main tasks executed in the project:

- Outline a general solution
- Architecture of data flow operations
- Implementing a Rails integration service on Heroku
- Implementing Cronjob workers.
- Front-end development for the integration status viewer

Project: Chilena Zurich and Rocketpin Integration

Full development life cycle of an integration Web application to extract, transform, and send information from the Rocketpin core app to *Chilena Zurich* API in order to integrate business and workflows with the *Chilena Zurich* company.

Main tasks executed in the project:

- Outline a general solution
- Architecture of data flow operations
- Implementing a Rails integration service on Heroku
- Implementing Cronjob workers
- Front-end development for the integration status viewer

Project: VROOM Routes

Implementations of optimal routes for service delivery

Main tasks executed in the project:

- Analysis, design, and implementation of CORE classes in Rails using the VROOM open-source project.
- Implementing a GraphQL API for delivering optimal routes
- Front-end development for the feature

Project: OLX and Rocketpin integration

Implementation of a micro REST API for vehicle insurance self-inspection with *OLX Chile*.

Main tasks executed in the project:

- Contributing with the REST API building with Flask (python)
- Deployment on AWS serverless infrastructure
- Python script worker for delivering CSV files to FTP server

Software Architect at Durán y Asociados, Caracas - Venezuela

Jan 2012 — Jul 2017

Duran y Asociados is a company specializing in world-class risk management practices related to frameworks and standards that are generally used in all types of organizations.

During this time, I participated in the following project:

Project: BRMSuite - Riskguard

The full development life cycle of a private Web application for managing banking risk, built with Ruby on Rails and based on Rails engines. The application targets the integral administration of banking risk, including the following risk management modules: operational, reputation, legal, credit, market, liquidity, and rates.

Main tasks executed in the project:

- Leading the software architectural decisions
- Designing the delivery process.
- Linux Server installation
- Database Administration

The Web application has been installed in multiple Venezuelan banks: Mi Banco Microfinanciero, Banco Plaza, Banco Nacional de Crédito, Bancrecer, Banco Exterior, Banco de Venezuela. International banking: Financiera Fama (Nicaragua) – Multibank (Panamá)

Instructor at IBM e-Power, San Cristobal - Venezuela

Nov 2006 — May 2009

IBM e-Power is an IBM partner specializing in IT professional training.

During this time, I participated in the following project:

Project: IBM Advanced Career Education Program

An IBM educational project sponsored by the Venezuelan government, intended to train people in information technology and software development.

Main tasks executed in the project:

- Teach the following topics: IT and Networking Fundamentals, Programming Fundamentals, and Enterprise Software Development

EDUCATION

Computer Engineer, Universidad Nacional Experimental del Táchira, San Cristóbal - Venezuela

Feb 2000 — Apr 2005

ACADEMIC PUBLICATION

Wumpus World on 3APL-M, The Netherlands

2005

Development of a Lightweight Deliberative Agent for the renowned Wumpus World Game running on mobile devices. The application integrates 3APL, Prolog and Java ME. The 3APL program is responsible for the deliberation. The world definition is done using the Prolog file. The Java code is responsible for the complex interface interaction on mobile devices.

Academic work done for computer engineer internships at “Universidad Nacional Experimental del Táchira” (2005) was published under the auspices of Dr Fernando Luis Koch at the Utrecht University Website
