Software Engineer

WORK EXPERIENCE

SOFTWARE ENGINEER

Suncorp Group (2024 July-Current)

- **Tech Stack:** Springboot (Java), React, Nodejs, Jenkins, Splunk, Axway, AWS (ROSA, EC2, S3, Cloudfront, Cloudtrail), Jira
- **Situation:** Continuation of delivering effectively for Chatbot team where left off last time.
- **Task:** Alongside delivery, engaged in improving existing processes by documenting and facilitating assets during planning, spiking out for new initiatives, resulting in continuous delivery and improving software practices.
- **Action:** Continuously engage with stakeholders, fix/analyse production issues, engage in release activities.
- **Result:** Significantly enhanced the efficiency of the team by resolving issues and creating automated processes.
- **Collaboration:** Effectively communicate with business analysts, product owners, QAs for estimating user stories. Helping to onboard new team members.
- **Contribution:** Received good feedback upon rejoining for past contributions as well as good feedback from new leaders for facilitating smooth onboarding upon joining and contributing quickly to newer projects.

ASSOCIATE

Infosys - Suncorp Group (2022 May-2024 January)

- **Tech Stack:** Springboot (Java), React, Nodejs, Jenkins, Splunk, Axway, AWS (ROSA, EC2, S3, Cloudfront, Cloudtrail), Jira
- **Situation:** Led the development of modern microservices using Springboot and React.
- **Task:** Spearheaded the development of modern microservices, harnessing the power of Springboot and React, resulting in a substantial boost in application stability and performance.
- **Action:** Conducted thorough smoke tests, swiftly resolved environment issues, and optimized deployment scripts for improved efficiency.
- **Result:** Significantly enhanced the application's stability and overall performance.
- **Collaboration:** Effectively translated business requirements into clear user stories, fostering seamless collaboration with QA and Product teams. Played a pivotal role in refining the backlog for streamlined development.
- **Contribution:** Received feedback for consistently exceeding performance expectations. Also, took charge of documenting releases, facilitating smooth onboarding for new team members, and maintaining high code quality through PR reviews.

ACADEMIC HISTORY

RMIT UNIVERSITY

Bachelor of Computer Science
(February 2017 - December 2020)

WORK RIGHTS

485 Temporary graduate visa with full working rights
until January 18, 2026

Software Engineer

JUNIOR SOFTWARE ENGINEER

Dusk Mobile, (2020 October-2020 December)

- **Tech Stack:** Laravel (PHP), Vuejs, MYSQL, AWS, trello
- **Situation:** Applied modern web development to address complex challenges.
- **Task:** Integrated UX wireframes into responsive UI web apps.
- **Action:** Collaborated with engineers for seamless UI-RESTful service integration.
- **Result:** Produced highly functional and user-friendly web applications.
- **Documentation:** Created and maintained technical documentation for REST endpoints.

FRONT END SOFTWARE ENGINEER

Reputataire, (2019 March-June)

- **Tech Stack:** React, nodejs, AWS, trello
- **Situation:** Resolved UI issues and integrated with new backend endpoints.
- **Task:** Applied agile methodologies for efficient UI development.
- **Action:** Automated tasks, ensuring high code quality using React and CSS.
- **Result:** Optimized UI responsiveness and functionality.

PERSONAL PROJECTS

Tech Stack: Nextjs (React), Nuxt (Vue), T3 stack, Typescript, TailwindCSS, DrizzleORM, Postgres, Vercel

All the projects can be found on <https://tanzim.dev/projects>

Netflix Clone

- A netflix clone full stack application where users can signup, login and search movies and tv shows.
- TMDB api is integrated to fetch data about movies and tv shows.
- User data safely stored in a postgres database connected to the backend using drizzle ORM.

Twitter Clone

- A twitter clone full stack application where users are able to post, like and reply to tweets.
- T3 stack is used to have a fully type safe full stack application with type safety shared across frontend and backend.
- React Query is used to load tweets as user scrolls with animations.
- User data stored in postgres database using prisma as the ORM.

CryptoTracker

- Tracks latest prices of over 10,000 cryptos, visualizes data using charts.
- Integrates with coingecko api to fetch latest pricing and details about crypto coins.
- Integrates with news api to search for news regarding cryptos.
- Stores data in postgres database using prisma as the ORM

POJO Generator

- A simple web application to convert json objects to Java POJO models
- Monaco Editor library is used to have a web IDE experience similar to VSCODE to write json structure and edit Java files.
- Everything is generated on the client side, meaning there is no backend calls to generate the models.

Notes

- A simple note taking web application which stores multiple notes with a title and a long description.
- Notes are cached on the browser local storage so users notes are saved on the browser.
