Languages

FRENCH: Mother tongue
ENGLISH: Working Proficiency
GERMAN: Conversational

Computer Skills

I am a Linux system administrator/engineer with experience ranging from small hand-managed infrastructures to large environments and datacenter building blocks. I can build a physical cloud from the ground up (hardware, networking, storage, virtualization, containers, configuration-management, monitoring, security topics and mail/web/directory services).

I regularly take up software development and integration tasks alongside standard operation work. I am familiar with the functional, object-oriented and system programming paradigms, as well as with web technologies. I mostly use the Elixir, Shell and Ruby programming languages for my own projects, but have already worked with significant Python, Java/Scala, Perl, golang and C codebases.

Working and exchanging with less technical users is a plus for me - I enjoy explaining, and working with people brings sense to my work. I've done so through work, open-source projects and local free-software groups.

Computer-related Work Experience

SINCE LATE 2022	Independent system administrator & software developer Linux-based infrastructure maintenance with occasional software development projects (mostly Elixir/Phoenix web services). Follow-up of long-term projects with my previous employers.
2020 - 2022	System administrator at E-DURABLE SA Design, implementation and maintenance of the company's in-house cloud (Recycled Cloud). I have, among others, worked with physical hardware, exterior/interior gateway protocols, distributed storage clusters, KVM virtualization, high-availability and multi-location redundancy.
2019 - 2021	System administrator at UNGLEICH GLARUS AG Infrastructure work for the company's IPv6-first datacenter and public cloud (data-centerlight).
2019	Research and teaching assistant at LAMP EPFL Maintenance of tools used for Dotty's (then next-gen Scala compiler) development and help with the courses given to IC students.
2018 - 2020	System administrator at INILAB AG Maintenance of a minimal container-based infrastructure and development pipeline.
2016 - 2019	IT HelpDesk Employee at EPFL First-level support for the University's IT services (<i>1234 desk</i> & hotline) as well as generic software (MS Windows, Apple OS X, Linux-based) and hardware troubleshooting (<i>Poseidon desk</i>) for students.

Education

2015 - 2019	Bachelor of Science in Computer Science EPFL (École Polytechnique Fédérale de Lausanne), Switzerland
2015	Baccalauréat Scientifique (S SI) France, "very good".

Other Interests

I am a practical person who loves to work with his hands! I have often balanced computer-work with side occupations related to food processing and agriculture. My long-term plan is to run a small-scale bakery as part-time occupation. On the cultural side, you can find me dancing traditional and folk dances... or playing folk songs on my accordion.
